TYPICAL EXTERIOR WALL SHEATHING (NOTE 2)	STUCCO AND DIRECTLY ADHERED STONE (NOTE 6)	MIN 7/16" 24/16 SPAN RATED OSB OR PLYWOOD INSTALLED HORIZONTALLY W/ 8d COMMON: 6" O.C. EDGE AND FIELD. 2x4 BLOCKING IS RECOMMENDED AT UNSUPPORTED PANEL EDGES.
	ALL OTHER VENEER	MIN 7/16" 24/16 SPAN RATED OSB OR PLYWOOD INSTALLED VERTICALLY (BLOCKED PANEL EDGES REQUIRED) OR HORIZONTALLY (UNBLOCKED PANEL EDGES, UNO) W/ 8d COMMON: 6" O.C. EDGES AND FIELD
ROOF DECK SHEATHING (NOTE 1)	METAL ROOF	MIN 15/32" 32/16 SPAN RATED PLYWOOD INSTALLED WITH LONG DIMENSION PERPENDICULAR TO SUPPORTS W/ RSRS-03 NAILS: 4" O.C. AT PANEL EDGES AND 6" O.C. IN THE FIELD (UNBLOCKED PANEL EDGES, UNO).
	SHINGLE ROOF	MIN 7/16" 24/16 SPAN RATED OSB OR PLYWOOD INSTALLED WITH LONG DIMENSION PERPENDICULAR TO SUPPORTS W/ RSRS-01 NAILS: 6" O.C. AT PANEL EDGES, AND 6" O.C. IN THE FIELD (UNBLOCKED PANEL EDGES, UNO).
FLOOR DECK SHEATHING: (NOTE 5)		23/32" T&G OSB OR PLYWOOD W/ 10d COMMON: 6" O.C AT PANEL EDGES, 12" O.C. IN THE FIELD (UNBLOCKED PANEL EDGES, UNO).
PORCH CEILING BOARD SHEATHING:		MIN 3/8" OSB OR PLYWOOD OR CDX INSTALLED PERPENDICULAR TO SUPPORTS W/ 8d COMMON: 3" O.C. AT PANEL EDGES, 12" O.C. IN THE FIELDOR MIN5/8" EXTERIOR GYPSUM CEILING BOARD, FASTEN w/ 5d x 15/8" COOLER NAIL OR NO.6 X 11/4" LONG SCREWS @ 4" O.C. EDGES, 8" O.C. FIELD (UNBLOCKED PANEL EDGES, UNO).

NOTES:
1. FOR SHEATHING THICKNESS GREATER THAN 15/32" CATEGORY, USE RSRS-03 NAILS.
2. COMMON NAILS IN WALL SHEATHING MAY BE SUBSTITUTED W/ 8d GALVANIZED BOX NAILS.
3. ZIP WALL SHEATHING IS AN ACCEPTABLE ALTERNATE FOR APA RATED WOOD STRUCTURAL PANEL.
4. ALL WOOD STRUCTURAL PANEL SHALL CONFORM TO THE MOST CURRENT APPLICABLE SPECIFICATION AND SUPPLEMENTS OF CURRENT APPROVED APA MANF. SPECIFICATIONS.
5. FLOOR FASTENERS ARE MINIMUM REQUIRED FOR DIAPHRAGM DESIGN. FOR INCREASED FLOOR PERFORMANCE AND TOHELP REDUCE SQUEAKING, RSRS-01 NAILS OR 8d SCREW NAILS ARE RECOMMENDED.
6. 15/32" 32/16 SPAN RATED OSB OR PLYWOOD WITH BLOCKED PANEL EDGES IS AN APA RECOMMENDATION PER APA TECHNICAL BULLETIN Q370 WHEN STUCCO LATH IS ATTACHED DIRECTLY TO OSB OR PLYWOOD. SHOULD BUILDER SPECIFICATIONS ALLOW, MIN STRUCTURAL REQUIREMENTS ARE7/16" 24/16 SPAN RATING INSTALLED HORIZONTALLY. INCLUDES FULL AND PARTIAL HEIGHT VENEER APPLICATIONS
7. ROOF DECK SHEATHING HAS BEEN ENGINEERED TO RESIST SASCE 7 WIND LOADS IN ACCORDANCE WITH FRC R301.2.1.1

PRE-ENGINEERED TRUSSES

1. NOTE : ROOF TRUSS TOP CHORDS SHALL HAVE A MINIMUM SPECIFIC GRAVITY OF 0.49 (SYP SPECIES OR BETTER)
2. ROOF OR FLOOR TRUSSES FABRICATED TO ACHIEVE THE ROOF PLANES DEPICTED ON THE ARCHITECTURAL PLANS SHALL BE DESIGNED UNDER THE SUPERVISION OF A REGISTERED PROFESSIONAL ENGINEER. ENGINEERING SHOP DRAWINGS SHALL BE PREPARED IN ACCORDANCE WITH ANSI/TPI AND SUBMITTED TO THE ENGINEER OF RECORD FOR APPROVAL PRIOR TO FABRICATION. DESIGN CRITERIA IS LOCATED ON SHEET ST-1 OF THE PLAN SETTEMPORARY BRACING SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR AND SHALL BE LEFT IN PLACE AFTER CONSTRUCTION IS COMPLETE.
3. TRUSSES SHALL BE DESIGNED TO MATCH THE ORIENTATION, SPAN DIRECTION, SPACING, BEARING & LOCATION OF THE FRAMING PLAN SHOWN HERE.
4. THE TRUSS ENGINEER SHALL PROVIDE ALL TRUSS TO TRUSS CONNECTION DESIGN AND SPECIFICATIONS AND SUBMIT THEM UNDER SIGN AND SEAL WITH THE TRUSS SHOP DRAWINGS.
5. TRUSS UPLIFTS HAVE BEEN CALCULATED BY THE ENGINEER OF RECORD AND TAKEN INTO CONSIDERATION DURING THE DESIGN OF THE UPLIFT RESTRAINT SYSTEM FOR THIS STRUCTURE. AS SUCH, THE REPORTED UPLIFTS ON THE TRUSS SHOP DRAWINGS MAY BE DISREGARDED.

NOTES:
1. SIMPSON ACRYLIC-TIE ADHESIVE OR EQUAL SHALL BE USED IN ALL DRILLED AND EPOXIED ANCHOR APPLICATIONS. ANCHOR BOLT, THREADED ROD, OR DOWELED REINFORCING STEEL MAY BE EMBEDDED TO THE SPECIFIED DEPTH, IN A HOLE AS SPECIFIED BY MANUFACTURER (TYPICALLY 1/16" TO 1/8" GREATER THAN SPECIFIED ANCHOR DIAMETER). ADHESIVE/EPOXY MUST FILL THE HOLE IN THE CONCRETE AND WOOD BOTTOM PLATE. MANUFACTURER'S SPECIFICATIONS MUST BE FOLLOWED FOR PROPER INSTALLATION.
2. REFER TO SIMPSON OR MITEK CATALOG FOR ADDITIONAL INSTALLATION INSTRUCTIONS.
3. IF CONNECTOR IS NOT LISTED ABOVE, CONTACT EOR FOR SPECIFIC FASTENING REQUIREMENTS.
4. POSITIVE PLACEMENT GUN NAILS, 2½" LONG, WITH EQUIVALENT DIAMETER TO COMMON NAILS SPECIFIED ABOVE MAY BE USED FOR ABU POST BASE ANCHORS, CS16, AND MSTA FLAT STRAPS.
5. MASONRY APPLICATION REQUIRE EQUIVALENT NUMBER OF TITEN ANCHORS IN LIEU OF 16d NAILS TO HDR CONNECTION. CMU REQUIRES ¼" Ø x 2 ¾" TITENS ILO 16d. CONCRETE REQUIRES EQUIVALENT NUMBER OF ¼" Ø x 1 ¾" TITENS ILO 16d.
6. MASONRY SCREWS AT EXTERIOR CMU APPLICATIONS TO HAVE FLAT HEADS.

MASONRY NOTES

1. ALL MASONRY UNITS SHALL MEET ASTM C90 STANDARD WITH f'm= 2000PSI AND SHALL BE ERECTED IN RUNNING BOND WITH TYPE M OR S MORTAR OVER FULL BED.
2. SHOULD LIMITED AREAS OF STACK BOND MASONRY EXIST, EVERY OTHER COURSE SHALL BE EQUIPPED w/ 9 GAUGE LADDER TYPE HORIZONTAL JOINT REINFORCEMENT
3. ALL GROUT TO BE MIXED PER ASTM C476 STANDARDS AND INSTALLED TO COMPLY WITH FBC R606.3.5. f'c = 3,000 PSI.
4. VERTICAL WALL REINFORCING TO BE ASTM A615 GRADE 60 REBAR.
5. LAPS BETWEEN VERTICAL REINFORCING AND DOWELS TO BE 30".
6. VERTICAL REINFORCING TO HAVE 10' STANDARD HOOK INTO BOND BEAM. DOWEL TO HAVE 10' STANDARD HOOK INTO FOOTING
7. PRE-CAST MASONRY LINTELS: SEE "LINTEL SCHEDULE" ON STRUCTURAL PLAN SHEET.
8. PROVIDE MOISTURE BARRIER FOR ALL UNTREATED LUMBER IN CONTACT WITH MASONRY OR CONCRETE.

CONCRETE AND FOUNDATION NOTES

1. CONCRETE COMPRESSIVE STRENGTH FOR FOOTINGS= 2,500 PSI AT 28 DAYS (UNO).
2. CONCRETE COMPRESSIVE STRENGTH FOR SLAB = 2,500 PSI AT 28 DAYS (UNO).
3. ALL REINFORCING STEEL #3 AND BIGGER SHALL BE ASTM A615 GRADE 40 DEFORMED BARS (UNO).
4. ALL REINFORCING STEEL SHALL HAVE 90 DEGREE BEND AT CORNERS WITH A 24" LAP24" LONG #4 BAR IS RECOMMENDED TO BE INSTALLED AT ALL REENTRANT CORNERS.
5. FIBERMESH IS AN ACCEPTABLE ALTERNATIVE AND SHALL NOT REQUIRE WWF. FIBER LENGTHS SHALL BE ½" TO 2" IN LENGTH. DOSAGE AMOUNTS SHALL RANGE FROM 0.75 TO 1.5 POUNDS PER CUBIC YARD IN ACCORDANCE WITH THE MANUFACTURER'S RECOMMENDATIONS. SYNTHETIC FIBERS SHALL COMPLY WITH ASTM C1116. THE MANUFACTURER OR SUPPLIER SHALL PROVIDE CERTIFICATION OF COMPLIANCE WHEN REQUESTED BY THE BUILDING OFFICIAL.
6. MASONRY STEMWALL AND MONOLITHIC FOOTING ARE INTERCHANGEABLE.
7. EARTH AND EARTH FILL SUPPORTING SLABS ON GRADE IS ASSUMED TO HAVE A MINIMUM BEARING CAPACITY OF 2,000 PSF IN ACCORDANCE WITH TABLE R401.4.1, AND SHALL BE FREE OF ORGANIC MATERIAL AND COHESIVE SOILS. COMPACT THE FILL IN 12" LIFTS TO AT LEAST 95% OF MODIFIED PROCTOR MAXIMUM DRY DENSITY. IT IS THE OWNER'S OR CONTRACTOR'S RESPONSIBILITY TO CONFIRM THESE ASSUMPTIONS.
8. CONCRETE FLOOR SLABS ON GRADE SHALL BE INSTALLED OVER A MINIMUM 6 MIL POLYETHYLENE VAPOR RETARDER WITH JOINTS LAPPED 6" AND SEALED OVER CLEAN, COMPACTED EARTH OR FILL WITH CODE APPROVED PROVISIONS FOR PREVENTION OF SUBTERRANEAN TERMITES.
9. STEMWALLS OVER 4 COURSES TALL REQUIRE SPECIAL ATTENTION TO BRACING DURING CONSTRUCTION. CONTACT ENGINEER OF RECORD IF THIS CONDITION EXISTS.
10. TO CONTROL CRACKING, CUT 1" SAWCUTS IN THE SLAB IN A 15'x15' GRID WITHIN 12 HOURS OF CONCRETE PLACEMENT. CONTACT EOR FOR ALTERNATIVE METHODS.CONTROL JOINTS ARE NOT REQUIRED WHEN WWF OR FIBERMESH ARE INCLUDED WITH CONCRETE WORK.
11. DO NOT SCALE FOOTING DIMENSIONS AND LOCATIONS FROM THE FOUNDATION PLAN. DO NOT DETERMINE FOOTING LOCATION FROM ARCHITECTURAL PLANS OR FRAMING PLAN. IF FOOTING SIZE OR LOCATION IS NOT DETERMINATE FROM USE OF FOUNDATION PLAN ALONE, CONTACT THE ENGINEER OF RECORD.

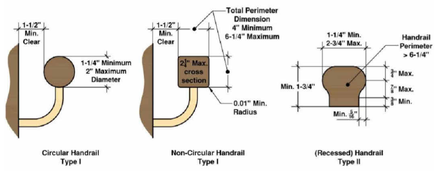
STAIRWAY NOTES

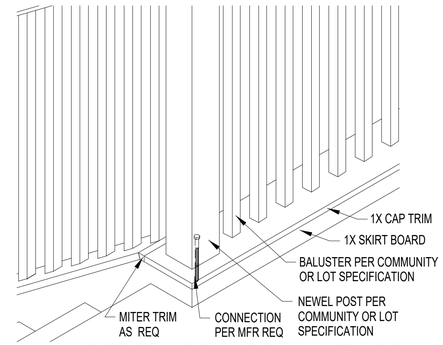
PER FBCR R301.5
STAIR RAILING AND STAIR GUARD RAILING SHALL BE CONSTRUCTED TO WITHSTAND A SINGLE CONCENTRATED LOAD OF 200 POUNDS APPLIED AT ANY POINT AND ANY DIRECTION ALONG THE TOP OF THE RAIL.

GUARD IN-FILL COMPONENTS (ALL THOSE EXCEPT THE HANDRAIL), BALUSTERS AND PANEL FILLERS SHALL BE DESIGNED TO WITHSTAND A HORIZONTALLY APPLIED NORMAL LOAD OF 50 POUNDS ON AN AREA EQUAL TO 1 SQUARE FOOT. THIS LOAD NEED NOT BE ASSUMED TO ACT CONCURRENTLY WITH ANY OTHER LIVE LOAD REQUIREMENT.

PER FBCR R311
STAIRWAYS SHALL MEET THE REQUIREMENTS OF FBCR R311.7 INCLUDING BUT NOT LIMITED TO THE FOLLOWING:
- RISER HEIGHT SHALL BE NOT MORE THAN 7.75 INCHES
- TREAD DEPTH SHALL BE NOT LESS THAN 10 INCHES
- HANDRAILS SHALL BE PROVIDED ON NOT LESS THAN ONE SIDE OF EACH FLIGHT AT A HEIGHT OF NOT LESS THAN 34 INCHES AND NOT MORE THAN 38 INCHES



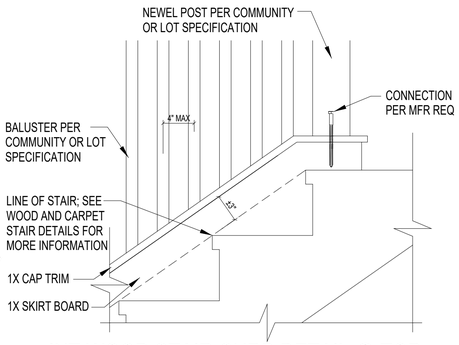
PER FBCR R312
ALL GUARDS SHALL BE MIN. 36" AFF AND SHALL NOT HAVE OPENINGS FROM THE WALKING SURFACE TO THE REQUIRED GUARD HEIGHT THAT ALLOW PASSAGE OF A SPHERE 4 INCHES IN DIAMETER.



HANDRAIL NOTES

PER R311.7.8.3 GRIP-SIZE
REQUIRED HANDRAILS SHALL BE OF ONE OF THE FOLLOWING TYPES OR PROVIDE EQUIVALENT GRASPABILITY.

1. TYPE I. HANDRAILS WITH A CIRCULAR CROSS SECTION SHALL HAVE AN OUTSIDE DIAMETER OF NOT LESS THAN 1 1/4 INCHES AND NOT GREATER THAN 2 INCHES. IF THE HANDRAIL IS NOT CIRCULAR, IT SHALL HAVE A PERIMETER DIMENSION OF NOT LESS THAN 4 INCHES AND NOT GREATER THAN 6 1/4 INCHES WITH A CROSS SECTION OF DIMENSION OF NOT MORE THAN 2 1/4 INCHES. EDGES SHALL HAVE A RADIUS OF NOT LESS THAN 0.01 INCH.



2. TYPE II. HANDRAILS WITH A PERIMETER GREATER THAN 6 1/4 INCHES (160 MM) SHALL HAVE A GRASPABLE FINGER RECESS AREA ON BOTH SIDES OF THE PROFILE. THE FINGER RECESS SHALL BEGIN WITHIN A DISTANCE OF 3/4 INCH MEASURED VERTICALLY FROM THE TALLEST PORTION OF THE PROFILE AND ACHIEVE A DEPTH OF NOT LESS THAN 5/16 INCH WITHIN 7/8 INCH BELOW THE WIDEST PORTION OF THE PROFILE. THIS REQUIRED DEPTH SHALL CONTINUE FOR NOT LESS THAN 3/8 INCH TO A LEVEL THAT IS NOT LESS THAN 1 3/4 INCHES BELOW THE TALLEST PORTION OF THE PROFILE. THE WIDTH OF THE HANDRAIL ABOVE THE RECESS SHALL BE NOT LESS THAN 1 1/4 INCHES AND NOT MORE THAN 2 3/4 INCHES. EDGES SHALL HAVE A RADIUS OF NOT LESS THAN 0.01 INCH.

FLASHING REQUIREMENTS

R703.1 General. Exterior walls shall provide the building with a weather-resistant exterior wall envelope. The exterior wall envelope shall include flashing as described in Section R703.4.

R703.1.1 Water resistance. The exterior wall envelope shall be designed and constructed in a manner that prevents the accumulation of water within the wall assembly by providing a water-resistant barrier behind the exterior cladding as required by Section R703.2 and a means of draining to the exterior water that penetrates the exterior cladding.

R703.2 Water-resistive barrier. One layer of No. 15 asphalt felt, free from holes and breaks, complying with ASTM D226 for Type 1 felt or other approved water-resistive barrier shall be applied over studs or sheathing of all exterior walls No. 15 asphalt felt shall be applied horizontally, with the upper layer lapped over the lower layer not less than 2 inches. Where joints occur, felt shall be lapped not less than 6 inches. Other approved materials shall be installed in accordance with the water-resistive barrier manufacturer's installation instructions. The No.15 asphalt felt or other approved water-resistive barrier material shall be continuous to the top of walls and terminated at penetrations and building appendages in a manner to meet the requirements of the exterior wall envelope as described in Section R703.1.

R703.7.3 Water-resistive barriers Water-resistive barriers shall be installed as required in Section R703.2 and, where applied over wood-based sheathing, shall include a water-resistive vapor-permeable barrier with a performance at least equivalent to two layers of Grade D paper. The individual layers shall be installed independently such that each layer provides a separate continuous plane and any flashing (installed in accordance with Section R703.4) intended to drain to the water-resistive barrier is directed between the layers.

Exception: Where the water-resistive barrier that is applied over wood-based sheathing has a water resistance equal to or greater than that of 60-minute Grade D paper and is separated from the stucco by an intervening, substantially nonwater-absorbing layer or designed drainage space.

R703.4 Flashing. Approved metal flashing, vinyl flashing, self-adhered membranes and mechanically attached flexible flashing shall be applied shingle-fashion or in accordance with the manufacturer's instructions. Metal flashing shall be corrosion resistant. Fluid-applied membranes used as flashing shall be applied in accordance with the manufacturer's instructions. All flashing shall be applied in a manner to prevent the entry of water into the wall cavity or penetration of water to the building structural framing components.

Self-adhered membranes used as flashing shall comply with AAMA 711. All exterior fenestration products shall be sealed at the juncture with the building wall with a sealant complying with AAMA 800 or ASTM C920 Class 25 Grade NS or greater for proper joint expansion and contraction, ASTMC1281, AAMA 812, or other approved standard as appropriate for the type of sealant. Fluid-applied membranes used as flashing in exterior walls shall comply with AAMA 714. The flashing shall extend to the surface of the exterior wall finish. Approved flashings shall be installed at the following locations:

1.Exterior window and door openings. Flashing at exterior window and door openings shall extend to the surface of the exterior wall finish or to the water-resistive barrier complying with Section 703.2 for subsequent drainage. Mechanically attached flexible flashings shall comply with AAMA 712. Flashing at exterior window and door openings shall be installed in accordance with one or more of the following:

1.1 The fenestration manufacturer's installation and flashing instructions, or for applications not addressed in the fenestration manufacturer's instructions, in accordance with the flashing manufacturer's instructions. Where flashing instructions or details are not provided, pan flashing shall be installed at the sill of exterior window and door openings. Pan flashing shall be sealed or sloped in such a manner as to direct water to the surface of the exterior wall finish or to the water resistive barrier for subsequent drainage. Openings using pan flashing shall incorporate flashing or protection at the head and sides.

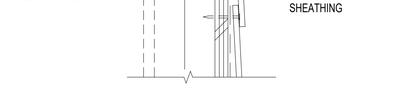
1.2. In accordance with the flashing design or method of a registered design professional.

1.3. In accordance with other approved methods.

1.4. In accordance with FMA/AAMA 100, FMA/ AAMA 200, FMA/WDMA 250, FMA/AAMA/WDMA 300 or FMA/AAMA/WDMA 400.

2. At the intersection of chimneys or other masonry construction with frame or stucco walls, with projecting lips on both sides under stucco copings.

3. Under and at the ends of masonry, wood or metal copings and sills.



4. Continuously above all projecting wood trim.

5. Where exterior porches, decks or stairs attach to a wall or floor assembly of wood-frame construction.

6. At wall and roof intersections.

FLASHING REQUIREMENTS

R703.1 General. Exterior walls shall provide the building with a weather-resistant exterior wall envelope. The exterior wall envelope shall include flashing as described in Section R703.4.

R703.1.1 Water resistance. The exterior wall envelope shall be designed and constructed in a manner that prevents the accumulation of water within the wall assembly by providing a water-resistant barrier behind the exterior cladding as required by Section R703.2 and a means of draining to the exterior water that penetrates the exterior cladding.

R703.2 Water-resistive barrier. One layer of No. 15 asphalt felt, free from holes and breaks, complying with ASTM D226 for Type 1 felt or other approved water-resistive barrier shall be applied over studs or sheathing of all exterior walls No. 15 asphalt felt shall be applied horizontally, with the upper layer lapped over the lower layer not less than 2 inches. Where joints occur, felt shall be lapped not less than 6 inches. Other approved materials shall be installed in accordance with the water-resistive barrier manufacturer's installation instructions. The No.15 asphalt felt or other approved water-resistive barrier material shall be continuous to the top of walls and terminated at penetrations and building appendages in a manner to meet the requirements of the exterior wall envelope as described in Section R703.1.

R703.7.3 Water-resistive barriers Water-resistive barriers shall be installed as required in Section R703.2 and, where applied over wood-based sheathing, shall include a water-resistive vapor-permeable barrier with a performance at least equivalent to two layers of Grade D paper. The individual layers shall be installed independently such that each layer provides a separate continuous plane and any flashing (installed in accordance with Section R703.4) intended to drain to the water-resistive barrier is directed between the layers.

Exception: Where the water-resistive barrier that is applied over wood-based sheathing has a water resistance equal to or greater than that of 60-minute Grade D paper and is separated from the stucco by an intervening, substantially nonwater-absorbing layer or designed drainage space.

R703.4 Flashing. Approved metal flashing, vinyl flashing, self-adhered membranes and mechanically attached flexible flashing shall be applied shingle-fashion or in accordance with the manufacturer's instructions. Metal flashing shall be corrosion resistant. Fluid-applied membranes used as flashing shall be applied in accordance with the manufacturer's instructions. All flashing shall be applied in a manner to prevent the entry of water into the wall cavity or penetration of water to the building structural framing components.

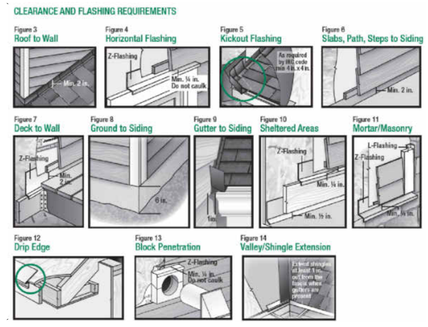
Self-adhered membranes used as flashing shall comply with AAMA 711. All exterior fenestration products shall be sealed at the juncture with the building wall with a sealant complying with AAMA 800 or ASTM C920 Class 25 Grade NS or greater for proper joint expansion and contraction, ASTMC1281, AAMA 812, or other approved standard as appropriate for the type of sealant. Fluid-applied membranes used as flashing in exterior walls shall comply with AAMA 714. The flashing shall extend to the surface of the exterior wall finish. Approved flashings shall be installed at the following locations:

1.Exterior window and door openings. Flashing at exterior window and door openings shall extend to the surface of the exterior wall finish or to the water-resistive barrier complying with Section 703.2 for subsequent drainage. Mechanically attached flexible flashings shall comply with AAMA 712. Flashing at exterior window and door openings shall be installed in accordance with one or more of the following:

1.1 The fenestration manufacturer's installation and flashing instructions, or for applications not addressed in the fenestration manufacturer's instructions, in accordance with the flashing manufacturer's instructions. Where flashing instructions or details are not provided, pan flashing shall be installed at the sill of exterior window and door openings. Pan flashing shall be sealed or sloped in such a manner as to direct water to the surface of the exterior wall finish or to the water resistive barrier for subsequent drainage. Openings using pan flashing shall incorporate flashing or protection at the head and sides.
1.2. In accordance with the flashing design or method of a registered design professional.
1.3. In accordance with other approved methods.
1.4. In accordance with FMA/AAMA 100, FMA/ AAMA 200, FMA/WDMA 250, FMA/AAMA/ WDMA 300 or FMA/AAMA/WDMA 400.

2. At the intersection of chimneys or other masonry construction with frame or stucco walls, with projecting lips on both sides under stucco copings.

3. Under and at the ends of masonry, wood or metal copings and sills.



4. Continuously above all projecting wood trim.

5. Where exterior porches, decks or stairs attach to a wall or floor assembly of wood-frame construction.

6. At wall and roof intersections.

7. At built-in gutters.

THESE DETAILS ARE GENERIC AND MEANT TO SHOW GENERAL FLASHING AND WATERPROOFING METHODS TO BE USED.
NOTE: OPTIONAL WEATHER BARRIER: LIQUID APPLIED WATER RESISTANT COATING - INSTALL PER MANUF. INSTRUCTIONS - WRAP ALL OPENINGS IN MASONRY EXTERIOR WALL AT HEAD, JAMB AND SILL

ELEVATION KEY NOTES

1. Roofing
   - A. See elevation or roof plan for roof overhangs.
   - B. Shingle, Tile, or Metal Roofing. installed over approved underlayment OR Single/Multi-ply roofing over approved substrate.
   - C. Indicates Aluminum, Vinyl, Hardi Soffit (Vented per attic venting calculations).
   - D. Indicates off-ridge roof vent. Refer to Roof Plan for calculation.
   - E. Indicates Flashing where roof planes intersect with wall planes.
   - F. Indicates the location of Aluminum, Vinyl, Hardi Fascia board.
   - G. Pre-fabricated aluminum awning/canopy
   - H. Single-Ply TPO.
2. Walls
   - A. Indicates decorative cementitious finish as per ASTM C-926. All textures are determined by the builder specifications.
   - B. Indicates Exterior Plaster finish on wire lath, over water resistive barriers, over wood sheathing on framed exterior wall.
   - C. Indicates fiber cement board or similar siding. (size per note)
   - D. Indicates Decorative Stucco Finish over rigid foam core.
   - E. Indicates Decorative Stucco banding/coating with a smooth finish.
   - F. Indicates simulated stone header (will need to show as staggered).
   - G. Indicates simulated stone veneer.
   - H. Indicates simulated brick veneer header.
   - I. Indicates simulated brick veneer.
   - J. Indicates deco foam with simulated wood finish applied to stucco.
   - K. Hardie Board and Batten.
   - L. Hardie Board Corner/Head/Sill Trim.
   - M. Exposed painted truss tails.
   - N. Applied Wall Tile.
   - O. Shake Siding
3. Indicates approved Overhead Garage Door.
4. Indicates P.T. wood post with approved wrap (PVC, Hardiboard, etc). Refer to structural plans for connections and post size.
5. Indicates Optional Exterior Wall Mounted Light Fixture. All fixtures are to be verified with elevation style. Center Line of light to be 6'-0" A.F.F. U.N.O.
6. Railing
   - A. Indicates Railing at 36" high. Railing is powder coated aluminum. (GC to coordinate color)
   - B. Indicates Railing at 36" high. Railing is stainless steel cable with powder coated aluminum post. Cable post are to be 2" away from adjacent wall or structure.
7. Indicates decorative non-structural band / bracket (reference Foam Detail sheets)
8. Indicates decorative shutters by others.

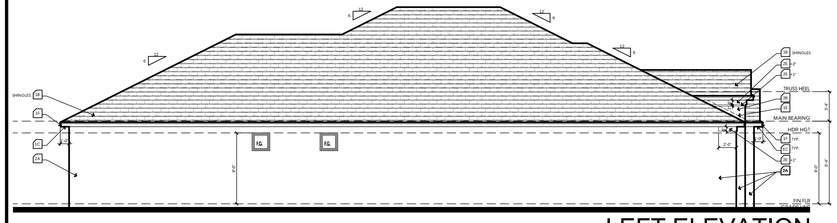
ELEVATION KEY NOTES

1. Roofing
   - A. See elevation or roof plan for roof overhangs.
   - B. Shingle, Tile, or Metal Roofing. installed over approved underlayment OR Single/Multi-ply roofing over approved substrate.
   - C. Indicates Aluminum, Vinyl, Hardi Soffit (Vented per attic venting calculations).
   - D. Indicates off-ridge roof vent. Refer to Roof Plan for calculation.
   - E. Indicates Flashing where roof planes intersect with wall planes.
   - F. Indicates the location of Aluminum, Vinyl, Hardi Fascia board.
   - G. Pre-fabricated aluminum awning/canopy
   - H. Single-Ply TPO.
2. Walls
   - A. Indicates decorative cementitious finish as per ASTM C-926. All textures are determined by the builder specifications.
   - B. Indicates Exterior Plaster finish on wire lath, over water resistive barriers, over wood sheathing on framed exterior wall.
   - C. Indicates fiber cement board or similar siding. (size per note)
   - D. Indicates Decorative Stucco Finish over rigid foam core.
   - E. Indicates Decorative Stucco banding/coating with a smooth finish.
   - F. Indicates simulated stone header (will need to show as staggered).
   - G. Indicates simulated stone veneer.
   - H. Indicates simulated brick veneer header.
   - I. Indicates simulated brick veneer.
   - J. Indicates deco foam with simulated wood finish applied to stucco.
   - K. Hardie Board and Batten.
   - L. Hardie Board Corner/Head/Sill Trim.
   - M. Exposed painted truss tails.
   - N. Applied Wall Tile.
   - O. Shake Siding
3. Indicates approved Overhead Garage Door.
4. Indicates P.T. wood post with approved wrap (PVC, Hardiboard, etc). Refer to structural plans for connections and post size.
5. Indicates Optional Exterior Wall Mounted Light Fixture. All fixtures are to be verified with elevation style. Center Line of light to be 6'-0" A.F.F. U.N.O.
6. Railing
   - A. Indicates Railing at 36" high. Railing is powder coated aluminum. (GC to coordinate color)
   - B. Indicates Railing at 36" high. Railing is stainless steel cable with powder coated aluminum post. Cable post are to be 2" away from adjacent wall or structure.
7. Indicates decorative non-structural band / bracket (reference Foam Detail sheets)
8. Indicates decorative shutters by others.



Note: This is a Master List of the materials used on the exterior elevations. Only the numbers shown on the exterior elevations apply to this structure.

GENERAL ELECTRICAL NOTES:

NOTES: UNLESS OTHERWISE NOTED,

1. Electrical outlet heights as measured from finished floor to center line of the box to be: 16" AFF (general). In a Flood Zone, all electrical equipment to be at or above DFE.

Kitchen	44" AFF
Bathroom	39" AFF
Laundry Room	36" AFF
Exterior Waterproof	12" AFF
Garage - general purpose	48" AFF
Range	2" AFF

2. All trim plates and devices to be ganged, where possible.
3. Electrical switches to be at 42" centerline above finished floor.
4. Electrical plan is intended for bid purposes only. All work shall be done in strict accordance with the National Electric Code (NEC), latest edition, by a licensed electrical contractor who shall be responsible for the installation & sizing of all electrical, wiring & accessories.
5. Smoke detectors shall be in accordance with R314.1 and listed in accordance with UL 217.
6. Provide AFCI's (Arc-Fault Circuit Interrupters) combination type installed to provide protection of the branch circuits in all dwelling units per NFPA 70 (Current Edition) and the NEC and as defined in UL 1699.
7. Provide Tamper Resistant Receptacles as required by the NFPA 70 (Current Edition).
8. Carbon Monoxide Protection: carbon monoxide alarms or detectors shall be installed in all dwelling units in accordance with FBC R315 and NFPA 70. Such devices shall be listed by the appropriate standard, either ANSI/UL 2034, standard for single and multiple station CO alarms or UL 2075, gas and vapor detector sensor, according to the installation.
9. R315.1.2 Combination Alarms: combination smoke/carbon monoxide alarms shall be listed and labeled by a Nationally Recognized Testing Laboratory.
10. Keep all smoke detectors minimum of 36" from bathroom doors.
11. In new construction, smoke detectors shall be hardwired into an A/C electrical power source and shall be equipped with a monitored battery backup.
12. Bathroom exhaust fans must vent to the exterior of the building, ventilation to attic space and soffits is not acceptable.
13. Chapter 45 Private Swimming Pools - Outdoor swimming pools shall be provided with a barrier complying with R4501.17.1.1 through R4501.17.1.14.
14. Add GFCI protection to receptacles in laundry rooms and utility rooms of dwellings where installed within 6' of the outside edge of a sink. This would include the receptacle installed for a washing machine. Receptacle outlets shall not be required on a wall directly behind a range or sink to fulfill the requirement of an outlet every 24". The width of the sink or range is not to be included in the spacing of the outlets unless the distance from the sink or range is greater than 12" for straight counter tops and 18" for sinks and ranges installed in corner counters.

REFER TO COVER SHEET GENERAL NOTES FOR ROOFING UNDERLAYMENT REQUIREMENTS FOR ROOF PITCHES LESS THAN 4:12

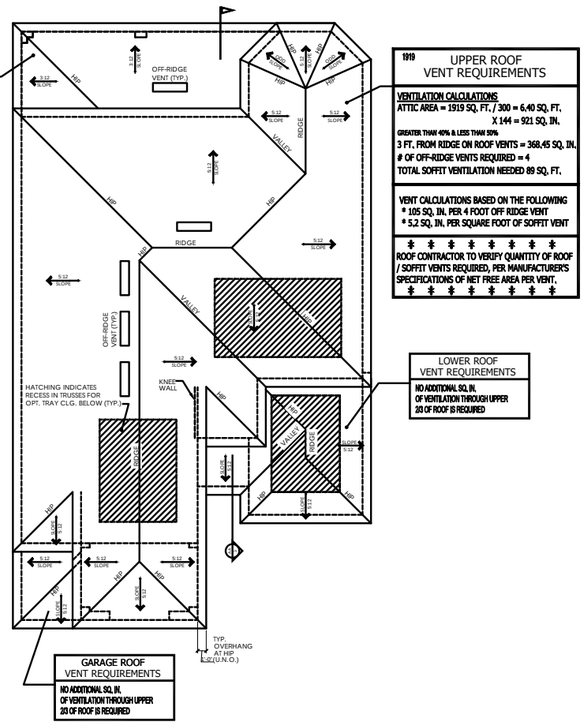
274 LANAI ROOF VENT REQUIREMENTS

VENTILATION CALCULATIONS
ATTIC AREA = 274 SQ. FT. / 300 = 0.91 SQ. FT.
X 144 = 132 SQ. IN.
GREATER THAN 40% & LESS THAN 50%
3 FT. FROM RIDGE ON ROOF VENTS = 52.61 SQ. IN.
OF OFF-RIDGE VENTS REQUIRED = 1
TOTAL SOFFIT VENTILATION NEEDED 13 SQ. FT.

1919 UPPER ROOF VENT REQUIREMENTS

VENTILATION CALCULATIONS
ATTIC AREA = 1919 SQ. FT. / 300 = 6.40 SQ. FT.
X 144 = 921 SQ. IN.
GREATER THAN 40% & LESS THAN 50%
3 FT. FROM RIDGE ON ROOF VENTS = 368.45 SQ. IN.
OF OFF-RIDGE VENTS REQUIRED = 4
TOTAL SOFFIT VENTILATION NEEDED 89 SQ. FT.

VENT CALCULATIONS BASED ON THE FOLLOWING
* 105 SQ. IN. PER 4 FOOT OFF RIDGE VENT
* 5.2 SQ. IN. PER SQUARE FOOT OF SOFFIT VENT



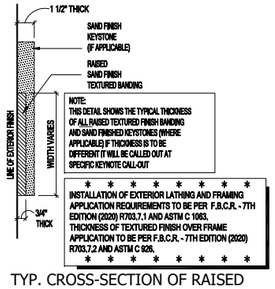
ROOF CONTRACTOR TO VERIFY QUANTITY OF ROOF / SOFFIT VENTS REQUIRED, PER MANUFACTURER'S SPECIFICATIONS OF NET FREE AREA PER VENT.

LOWER ROOF VENT REQUIREMENTS

NO ADDITIONAL SQ. IN. OF VENTILATION THROUGH UPPER 2/3 OF ROOF IS REQUIRED

GARAGE ROOF VENT REQUIREMENTS

NO ADDITIONAL SQ. IN. OF VENTILATION THROUGH UPPER 2/3 OF ROOF IS REQUIRED



WINDOW FALL PROTECTION

IN DWELLING UNITS, WHERE THE OPENING OF AN OPERABLE WINDOW IS LOCATED MORE THAN 72 INCHES ABOVE THE FINISHED GRADE OR SURFACE BELOW, THE LOWEST PART OF THE CLEAR OPENING OF THE WINDOW SHALL BE A MINIMUM OF 24 INCHES ABOVE THE FINISHED FLOOR OF THE ROOM IN WHICH THE WINDOW IS LOCATED. OPERABLE SECTIONS OF WINDOWS SHALL NOT PERMIT OPENINGS THAT ALLOW PASSAGE OF A 4 INCH DIAMETER SPHERE WHERE SUCH OPENINGS ARE LOCATED WITHIN 24 INCHES OF THE FINISHED FLOOR PER F.B.C.R. - 7TH EDITION (2020) R312.2

WINDOW FALL PREVENTION DEVICES AND WINDOW GUARDS, WHERE PROVIDED, SHALL COMPLY WITH THE REQUIREMENTS OF ASTM F 2090 PER F.B.C.R. - 7TH EDITION (2020) R312.2

ELEVATION KEY NOTES

1. Roofing
   - A. See elevation or roof plan for roof overhangs.
   - B. Shingle, Tile, or Metal Roofing. installed over approved underlayment OR Single/Multi-ply roofing over approved substrate.
   - C. Indicates Aluminum, Vinyl, Hardi Soffit (Vented per attic venting calculations).
   - D. Indicates off-ridge roof vent. Refer to Roof Plan for calculation.
   - E. Indicates Flashing where roof planes intersect with wall planes.
   - F. Indicates the location of Aluminum, Vinyl, Hardi Fascia board.
   - G. Pre-fabricated aluminum awning/canopy
   - H. Single-Ply TPO.
2. Walls
   - A. Indicates decorative cementitious finish as per ASTM C-926. All textures are determined by the builder specifications.
   - B. Indicates Exterior Plaster finish on wire lath, over water resistive barriers, over wood sheathing on framed exterior wall.
   - C. Indicates fiber cement board or similar siding. (size per note)
   - D. Indicates Decorative Stucco Finish over rigid foam core.
   - E. Indicates Decorative Stucco banding/coating with a smooth finish.
   - F. Indicates simulated stone header (will need to show as staggered).
   - G. Indicates simulated stone veneer.
   - H. Indicates simulated brick veneer header.
   - I. Indicates simulated brick veneer.
   - J. Indicates deco foam with simulated wood finish applied to stucco.
   - K. Hardie Board and Batten.
   - L. Hardie Board Corner/Head/Sill Trim.
   - M. Exposed painted truss tails.
   - N. Applied Wall Tile.
   - O. Shake Siding
3. Indicates approved Overhead Garage Door.
4. Indicates P.T. wood post with approved wrap (PVC, Hardiboard, etc). Refer to structural plans for connections and post size.

1. Roofing
   - A. See elevation or roof plan for roof overhangs.
   - B. Shingle, Tile, or Metal Roofing. installed over approved underlayment OR Single/Multi-ply roofing over approved substrate.
   - C. Indicates Aluminum, Vinyl, Hardi Soffit (Vented per attic venting calculations).
   - D. Indicates off-ridge roof vent. Refer to Roof Plan for calculation.
   - E. Indicates Flashing where roof planes intersect with wall planes.
   - F. Indicates the location of Aluminum, Vinyl, Hardi Fascia board.
   - G. Pre-fabricated aluminum awning/canopy
   - H. Single-Ply TPO.
2. Walls
   - A. Indicates decorative cementitious finish as per ASTM C-926. All textures are determined by the builder specifications.
   - B. Indicates Exterior Plaster finish on wire lath, over water resistive barriers, over wood sheathing on framed exterior wall.
   - C. Indicates fiber cement board or similar siding. (size per note)
   - D. Indicates Decorative Stucco Finish over rigid foam core.
   - E. Indicates Decorative Stucco banding/coating with a smooth finish.
   - F. Indicates simulated stone header (will need to show as staggered).
   - G. Indicates simulated stone veneer.
   - H. Indicates simulated brick veneer header.
   - I. Indicates simulated brick veneer.

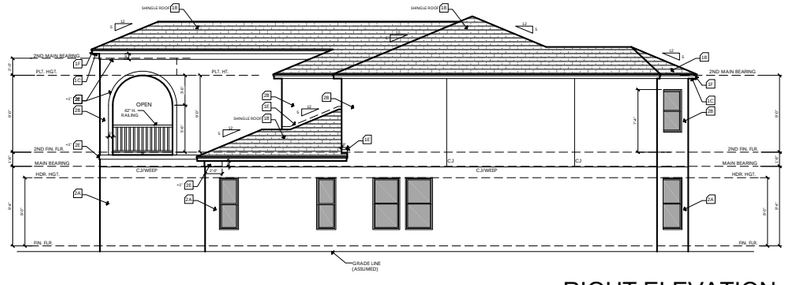
   - B. Shingle, Tile, or Metal Roofing. installed over approved underlayment OR Single/Multi-ply roofing over approved substrate.
   - C. Indicates Aluminum, Vinyl, Hardi Soffit (Vented per attic venting calculations).
   - D. Indicates off-ridge roof vent. Refer to Roof Plan for calculation.
   - E. Indicates Flashing where roof planes intersect with wall planes.
   - F. Indicates the location of Aluminum, Vinyl, Hardi Fascia board.
   - G. Pre-fabricated aluminum awning/canopy
   - H. Single-Ply TPO.
2. Walls
   - A. Indicates decorative cementitious finish as per ASTM C-926. All textures are determined by the builder specifications.
   - B. Indicates Exterior Plaster finish on wire lath, over water resistive barriers, over wood sheathing on framed exterior wall.
   - C. Indicates fiber cement board or similar siding. (size per note)
   - D. Indicates Decorative Stucco Finish over rigid foam core.
   - E. Indicates Decorative Stucco banding/coating with a smooth finish.
   - F. Indicates simulated stone header (will need to show as staggered).
   - G. Indicates simulated stone veneer.
   - H. Indicates simulated brick veneer header.
   - I. Indicates simulated brick veneer.
   - J. Indicates deco foam with simulated wood finish applied to stucco.
   - K. Hardie Board and Batten.
   - L. Hardie Board Corner/Head/Sill Trim.
   - M. Exposed painted truss tails.
   - N. Applied Wall Tile.
   - O. Shake Siding
3. Indicates approved Overhead Garage Door.
4. Indicates P.T. wood post with approved wrap (PVC, Hardiboard, etc). Refer to structural plans for connections and post size.
5. Indicates Optional Exterior Wall Mounted Light Fixture. All fixtures are to be verified with elevation style. Center Line of light to be 6'-0" A.F.F. U.N.O.
6. Railing
   - A. Indicates Railing at 36" high. Railing is powder coated aluminum. (GC to coordinate color)
   - B. Indicates Railing at 36" high. Railing is stainless steel cable with powder coated aluminum post. Cable post are to be 2" away from adjacent wall or structure.
7. Indicates decorative non-structural band / bracket (reference Foam Detail sheets)
8. Indicates decorative shutters by others.



Note: This is a Master List of the materials used on the exterior elevations. Only the numbers shown on the exterior elevations apply to this structure.

1. Roofing
   - A. See elevation or roof plan for roof overhangs.
   - B. Shingle, Tile, or Metal Roofing. installed over approved underlayment OR Single/Multi-ply roofing over approved substrate.
   - C. Indicates Aluminum, Vinyl, Hardi Soffit (Vented per attic venting calculations).
   - D. Indicates off-ridge roof vent. Refer to Roof Plan for calculation.
   - E. Indicates Flashing where roof planes intersect with wall planes.
   - F. Indicates the location of Aluminum, Vinyl, Hardi Fascia board.
   - G. Pre-fabricated aluminum awning/canopy
   - H. Single-Ply TPO.
2. Walls
   - A. Indicates decorative cementitious finish as per ASTM C-926. All textures are determined by the builder specifications.
   - B. Indicates Exterior Plaster finish on wire lath, over water resistive barriers, over wood sheathing on framed exterior wall.
   - C. Indicates fiber cement board or similar siding. (size per note)
   - D. Indicates Decorative Stucco Finish over rigid foam core.
   - E. Indicates Decorative Stucco banding/coating with a smooth finish.
   - F. Indicates simulated stone header (will need to show as staggered).
   - G. Indicates simulated stone veneer.
   - H. Indicates simulated brick veneer header.
   - I. Indicates simulated brick veneer.

SECTION AA
SCALE: 1/8" = 1'-0"

ELEVATION KEY NOTES

1. Roofing
   - A. See elevation or roof plan for roof overhangs.
   - B. Shingle, Tile, or Metal Roofing. installed over approved underlayment OR Single/Multi-ply roofing over approved substrate.
   - C. Indicates Aluminum, Vinyl, Hardi Soffit (Vented per attic venting calculations).
   - D. Indicates off-ridge roof vent. Refer to Roof Plan for calculation.
   - E. Indicates Flashing where roof planes intersect with wall planes.
   - F. Indicates the location of Aluminum, Vinyl, Hardi Fascia board.
   - G. Pre-fabricated aluminum awning/canopy
   - H. Single-Ply TPO.
2. Walls
   - A. Indicates decorative cementitious finish as per ASTM C-926. All textures are determined by the builder specifications.
   - B. Indicates Exterior Plaster finish on wire lath, over water resistive barriers, over wood sheathing on framed exterior wall.
   - C. Indicates fiber cement board or similar siding. (size per note)
   - D. Indicates Decorative Stucco Finish over rigid foam core.
   - E. Indicates Decorative Stucco banding/coating with a smooth finish.
   - F. Indicates simulated stone header (will need to show as staggered).
   - G. Indicates simulated stone veneer.
   - H. Indicates simulated brick veneer header.
   - I. Indicates simulated brick veneer.
   - J. Indicates deco foam with simulated wood finish applied to stucco.
   - K. Hardie Board and Batten.
   - L. Hardie Board Corner/Head/Sill Trim.
   - M. Exposed painted truss tails.
   - N. Applied Wall Tile.
   - O. Shake Siding
3. Indicates approved Overhead Garage Door.
4. Indicates P.T. wood post with approved wrap (PVC, Hardiboard, etc). Refer to structural plans for connections and post size.
5. Indicates Optional Exterior Wall Mounted Light Fixture. All fixtures are to be verified with elevation style. Center Line of light to be 6'-0" A.F.F. U.N.O.
6. Railing
   - A. Indicates Railing at 36" high. Railing is powder coated aluminum. (GC to coordinate color)
   - B. Indicates Railing at 36" high. Railing is stainless steel cable with powder coated aluminum post. Cable post are to be 2" away from adjacent wall or structure.
7. Indicates decorative non-structural band / bracket (reference Foam Detail sheets)
8. Indicates decorative shutters by others.

Note: This is a Master List of the materials used on the exterior elevations. Only the numbers shown on the exterior elevations apply to this structure.

EGRESS NOTE:
EACH BEDROOM MUST HAVE ONE WINDOW THAT COMPLIES WITH EGRESS CODES. IF THERE IS NO ACCESS TO EXTERIOR THROUGH A DOOR, THE WINDOW MUST HAVE A MAXIMUM SILL HEIGHT OF 44" ABOVE FINISH FLOOR LINE OF THAT PARTICULAR ROOM

NOTE: ALL BANDING IS TO BE RAISED SAND FINISH

1. Roofing
   - A. See elevation or roof plan for roof overhangs.
   - B. Shingle, Tile, or Metal Roofing. installed over approved underlayment OR Single/Multi-ply roofing over approved substrate.
   - C. Indicates Aluminum, Vinyl, Hardi Soffit (Vented per attic venting calculations).
   - D. Indicates off-ridge roof vent. Refer to Roof Plan for calculation.
   - E. Indicates Flashing where roof planes intersect with wall planes.
   - F. Indicates the location of Aluminum, Vinyl, Hardi Fascia board.
   - G. Pre-fabricated aluminum awning/canopy
   - H. Single-Ply TPO.
2. Walls
   - A. Indicates decorative cementitious finish as per ASTM C-926. All textures are determined by the builder specifications.
   - B. Indicates Exterior Plaster finish on wire lath, over water resistive barriers, over wood sheathing on framed exterior wall.
   - C. Indicates fiber cement board or similar siding. (size per note)
   - D. Indicates Decorative Stucco Finish over rigid foam core.
   - E. Indicates Decorative Stucco banding/coating with a smooth finish.
   - F. Indicates simulated stone header (will need to show as staggered).
   - G. Indicates simulated stone veneer.
   - H. Indicates simulated brick veneer header.
   - I. Indicates simulated brick veneer.
   - J. Indicates deco foam with simulated wood finish applied to stucco.
   - K. Hardie Board and Batten.
   - L. Hardie Board Corner/Head/Sill Trim.
   - M. Exposed painted truss tails.
   - N. Applied Wall Tile.
   - O. Shake Siding
3. Indicates approved Overhead Garage Door.
4. Indicates P.T. wood post with approved wrap (PVC, Hardiboard, etc). Refer to structural plans for connections and post size.
5. Indicates Optional Exterior Wall Mounted Light Fixture. All fixtures are to be verified with elevation style. Center Line of light to be 6'-0" A.F.F. U.N.O.
6. Railing
   - A. Indicates Railing at 36" high. Railing is powder coated aluminum. (GC to coordinate color)
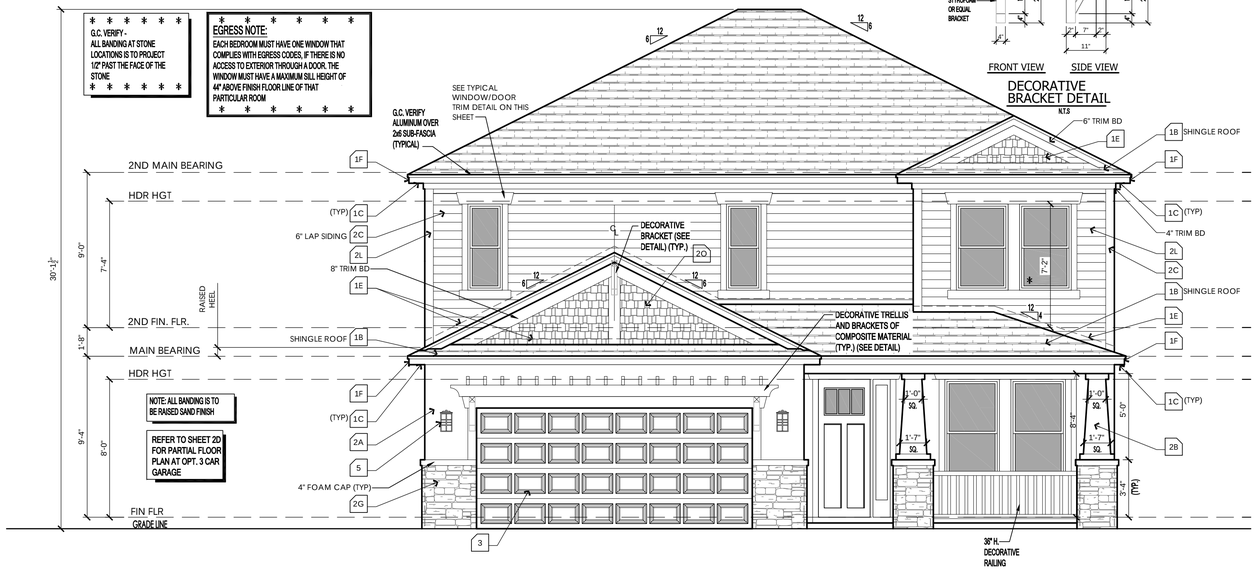
   - B. Indicates Railing at 36" high. Railing is stainless steel cable with powder coated aluminum post. Cable post are to be 2" apart from adjacent wall or structure.
7. Indicates decorative non-structural band / bracket (reference Foam Detail sheets)
8. Indicates decorative shutters by others.



Note: This is a Master List of the materials used on the exterior elevations. Only the numbers shown on the exterior elevations apply to this structure.

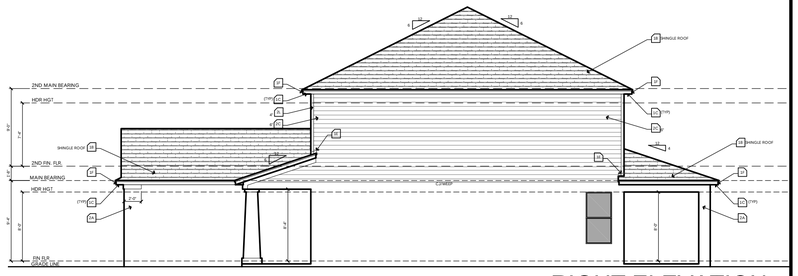
ELEVATION KEY NOTES

1. Roofing
   - A. See elevation or roof plan for roof overhangs.
   - B. Shingle, Tile, or Metal Roofing. installed over approved underlayment OR Single/Multi-ply roofing over approved substrate.
   - C. Indicates Aluminum, Vinyl, Hardi Soffit (Vented per attic venting calculations).
   - D. Indicates off-ridge roof vent. Refer to Roof Plan for calculation.
   - E. Indicates Flashing where roof planes intersect with wall planes.
   - F. Indicates the location of Aluminum, Vinyl, Hardi Fascia board.
   - G. Pre-fabricated aluminum awning/canopy
   - H. Single-Ply TPO.
2. Walls
   - A. Indicates decorative cementitious finish as per ASTM C-926. All textures are determined by the builder specifications.
   - B. Indicates Exterior Plaster finish on wire lath, over water resistive barriers, over wood sheathing on framed exterior wall.
   - C. Indicates fiber cement board or similar siding. (size per note)
   - D. Indicates Decorative Stucco Finish over rigid foam core.
   - E. Indicates Decorative Stucco banding/coating with a smooth finish.
   - F. Indicates simulated stone header (will need to show as staggered).
   - G. Indicates simulated stone veneer.
   - H. Indicates simulated brick veneer header.
   - I. Indicates simulated brick veneer.
   - J. Indicates deco foam with simulated wood finish applied to stucco.
   - K. Hardie Board and Batten.
   - L. Hardie Board Corner/Head/Sill Trim.
   - M. Exposed painted truss tails.
   - N. Applied Wall Tile.
   - O. Shake Siding
3. Indicates approved Overhead Garage Door.
4. Indicates P.T. wood post with approved wrap (PVC, Hardiboard, etc). Refer to structural plans for connections and post size.
5. Indicates Optional Exterior Wall Mounted Light Fixture. All fixtures are to be verified with elevation style. Center Line of light to be 6'-0" A.F.F. U.N.O.
6. Railing
   - A. Indicates Railing at 36" high. Railing is powder coated aluminum. (GC to coordinate color)
   - B. Indicates Railing at 36" high. Railing is stainless steel cable with powder coated aluminum post. Cable post are to be 2" away from adjacent wall or structure.
7. Indicates decorative non-structural band / bracket (reference Foam Detail sheets)
8. Indicates decorative shutters by others.

Note: This is a Master List of the materials used on the exterior elevations. Only the numbers shown on the exterior elevations apply to this structure.

WINDOW FALL PROTECTION



IN DWELLING UNITS, WHERE THE OPENING OF AN OPERABLE WINDOW IS LOCATED MORE THAN 72 INCHES ABOVE THE FINISHED GRADE OR SURFACE BELOW, THE LOWEST PART OF THE CLEAR OPENING OF THE WINDOW SHALL BE A MINIMUM OF 24 INCHES ABOVE THE FINISHED FLOOR OF THE ROOM IN WHICH THE WINDOW IS LOCATED. OPERABLE SECTIONS OF WINDOWS SHALL NOT PERMIT OPENINGS THAT ALLOW PASSAGE OF A 4 INCH DIAMETER SPHERE WHERE SUCH OPENINGS ARE LOCATED WITHIN 24 INCHES OF THE FINISHED FLOOR PER F.B.C.R. - 7TH EDITION (2020) R312.2
WINDOW FALL PREVENTION DEVICES AND WINDOW GUARDS, WHERE PROVIDED, SHALL COMPLY WITH THE REQUIREMENTS OF ASTM F 2090 PER F.B.C.R. - 7TH EDITION (2020) R312.2

ELEVATION KEY NOTES

1. Roofing
   - A. See elevation or roof plan for roof overhangs.
   - B. Shingle, Tile, or Metal Roofing. installed over approved underlayment OR Single/Multi-ply roofing over approved substrate.
   - C. Indicates Aluminum, Vinyl, Hardi Soffit (Vented per attic venting calculations).
   - D. Indicates off-ridge roof vent. Refer to Roof Plan for calculation.
   - E. Indicates Flashing where roof planes intersect with wall planes.
   - F. Indicates the location of Aluminum, Vinyl, Hardi Fascia board.
   - G. Pre-fabricated aluminum awning/canopy
   - H. Single-Ply TPO.
2. Walls
   - A. Indicates decorative cementitious finish as per ASTM C-926. All textures are determined by the builder specifications.
   - B. Indicates Exterior Plaster finish on wire lath, over water resistive barriers, over wood sheathing on framed exterior wall.
   - C. Indicates fiber cement board or similar siding. (size per note)
   - D. Indicates Decorative Stucco Finish over rigid foam core.
   - E. Indicates Decorative Stucco banding/coating with a smooth finish.
   - F. Indicates simulated stone header (will need to show as staggered).
   - G. Indicates simulated stone veneer.
   - H. Indicates simulated brick veneer header.
   - I. Indicates simulated brick veneer.
   - J. Indicates deco foam with simulated wood finish applied to stucco.
   - K. Hardie Board and Batten.
   - L. Hardie Board Corner/Head/Sill Trim.
   - M. Exposed painted truss tails.
   - N. Applied Wall Tile.
   - O. Shake Siding
3. Indicates approved Overhead Garage Door.
4. Indicates P.T. wood post with approved wrap (PVC, Hardiboard, etc). Refer to structural plans for connections and post size.
5. Indicates Optional Exterior Wall Mounted Light Fixture. All fixtures are to be verified with elevation style. Center Line of light to be 6'-0" A.F.F. U.N.O.
6. Railing
   - A. Indicates Railing at 36" high. Railing is powder coated aluminum. (GC to coordinate color)
   - B. Indicates Railing at 36" high. Railing is stainless steel cable with powder coated aluminum post. Cable post are to be 2" away from adjacent wall or structure.
7. Indicates decorative non-structural band / bracket (reference Foam Detail sheets)
8. Indicates decorative shutters by others.

ROOF PLAN
SCALE: 1/8" = 1'-0"

MAIN ROOF VENT REQUIREMENTS

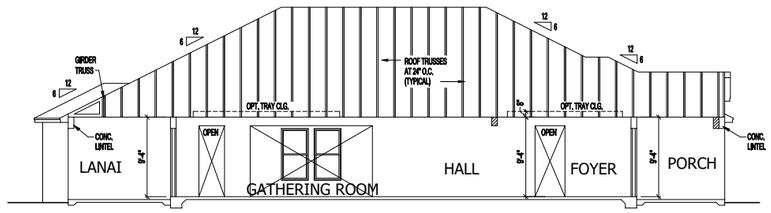
VENTILATION CALCULATIONS:
ATTIC AREA = 3879 SQ. FT. / 300 = 12.93 SQ. FT.
X 144 = 1861 SQ. IN.

GREATER THAN 40% & LESS THAN 50%
3 FT. FROM RIDGE ON ROOF VENTS = 744.58 SQ. IN.
OF OFF-RIDGE VENTS REQUIRED = 6
TOTAL SOFFIT VENTILATION NEEDED 179 SQ. FT.

VENT CALCULATIONS BASED ON THE FOLLOWING
* 144 SQ. IN. PER 4 FOOT OFF RIDGE VENT
* 5.2 SQ. IN. PER SQUARE FOOT OF SOFFIT VENT



G.C. VERIFY QUANTITY OF ROOF / SOFFIT VENTS REQUIRED, PER MANUFACTURER'S SPECIFICATIONS OF NET FREE AREA PER VENT.

NOTE:
THIS DETAIL SHOWS THE TYPICAL THICKNESS OF ALL RAISED TEXTURED FINISH BANDING AND SAND FINISHED KEYSTONES (WHERE APPLICABLE) IF THICKNESS IS TO BE DIFFERENT IT WILL BE CALLED OUT AT SPECIFIC KEYNOTE CALL-OUT

INSTALLATION OF EXTERIOR LATHING AND FRAMING APPLICATION REQUIREMENTS TO BE PER F.B.C.R. - 7TH EDITION (2020) R703.7.1 AND ASTM C 1063. THICKNESS OF TEXTURED FINISH OVER FRAME APPLICATION TO BE PER F.B.C.R. - 7TH EDITION (2020) R703.7.2 AND ASTM C 926.

1. Roofing
   - A. See elevation or roof plan for roof overhangs.
   - B. Shingle, Tile, or Metal Roofing. installed over approved underlayment OR Single/Multi-ply roofing over approved substrate.
   - C. Indicates Aluminum, Vinyl, Hardi Soffit (Vented per attic venting calculations).
   - D. Indicates off-ridge roof vent. Refer to Roof Plan for calculation.
   - E. Indicates Flashing where roof planes intersect with wall planes.
   - F. Indicates the location of Aluminum, Vinyl, Hardi Fascia board.
   - G. Pre-fabricated aluminum awning/canopy
   - H. Single-Ply TPO.
2. Walls
   - A. Indicates decorative cementitious finish as per ASTM C-926. All textures are determined by the builder specifications.
   - B. Indicates Exterior Plaster finish on wire lath, over water resistive barriers, over wood sheathing on framed exterior wall.
   - C. Indicates fiber cement board or similar siding. (size per note)
   - D. Indicates Decorative Stucco Finish over rigid foam core.
   - E. Indicates Decorative Stucco banding/coating with a smooth finish.
   - F. Indicates simulated stone header (will need to show as staggered).
   - G. Indicates simulated stone veneer.
   - H. Indicates simulated brick veneer header.
   - I. Indicates simulated brick veneer.
   - J. Indicates deco foam with simulated wood finish applied to stucco.
   - K. Hardie Board and Batten.
   - L. Hardie Board Corner/Head/Sill Trim.
   - M. Exposed painted truss tails.
   - N. Applied Wall Tile.
   - O. Shake Siding
3. Indicates approved Overhead Garage Door.
4. Indicates P.T. wood post with approved wrap (PVC, Hardiboard, etc). Refer to structural plans for connections and post size.
5. Indicates Optional Exterior Wall Mounted Light Fixture. All fixtures are to be verified with elevation style. Center Line of light to be 6'-0" A.F.F. U.N.O.
6. Railing
   - A. Indicates Railing at 36" high. Railing is powder coated aluminum. (GC to coordinate color)
   - B. Indicates Railing at 36" high. Railing is stainless steel cable with powder coated aluminum post. Cable post are to be 2" away from adjacent wall or structure.
7. Indicates decorative non-structural band / bracket (reference Foam Detail sheets)
8. Indicates decorative shutters by others.

08-06-18 COMPLETED REVISIONS TO INCLUDE:

MOVED THE ATTIC ACCESS TO THE SIDE OF THE GARAGE.

09-08-18 COMPLETED REVISIONS TO INCLUDE:

ADDED 3 CAR GARAGE OPTION FOR TRADITIONAL AND CRAFTSMAN ELEVATIONS.

09-18-18 COMPLETED VORTEX ENGINEERING MARK-UPS AND ADDED NEW TRUSS LAYOUTS.

10-08-18 COMPLETED REVISIONS TO INCLUDE:

ADDED VORTEX ENGINEERING AND TRUSS LAYOUTS FOR 3 CAR GARAGE OPTION FOR TRADITIONAL AND CRAFTSMAN ELEVATIONS.

12-17-18 MIRRORED LEFT HAND GARAGE PLAN TO CREATE RIGHT HAND GARAGE PLAN.

01-30-19 COMPLETED REVISIONS TO INCLUDE:

ADDED AIR SWITCH AT DISP.

REVISED SIDE WALL AT REF. TO BE 25" LONG.

ADDED OPT. SHAMPOO NICHE AT ALL SHOWERS.

ADDED OPT. RAIN SHOWER HEAD AT OWNER'S BATH SHOWER.

OPT. HAND HELD SHOWER HEAD AT OWNER'S BATH SHOWER.

ADDED OPT. POT FILLER AT GOURMET KITCHEN ONLY.

ADDED ALT. LOCATION OF A/C PAD.

04-25-19 COMPLETED REVISIONS TO INCLUDE:

CHANGED ALL INTERIOR ARCHED HEADERS TO BE FLAT HEADERS AND REMOVED ALL PLANT SHELVES.

06-27-19 COMPLETED REVISIONS TO INCLUDE:

UPDATED ELECTRICAL PLAN WITH LIST OF CHANGES, UPDATED TO INCLUDE LED LIGHTING, 9000 SERIES.

09-27-19 COMPLETED REVISIONS TO INCLUDE:

REVISED COACH LIGHT TO "KICHLER - BEACON SQUARE" FOR CRAFTSMAN ELEVATIONS ONLY

REVISED SIMPSON FASTENERS PER VORTEX MARK-UPS

10-15-19 COMPLETED REVISIONS TO INCLUDE:

ADDED DIMENSION TO LIGHT AT CASUAL DINING.

10-23-19 CREATED 3 CAR ELEVATION FOR MEDITERRANEAN ELEVATIONS.

12-16-19 COMPLETED REVISIONS TO INCLUDE:

- CLIENT REVISIONS TO 9000 SERIES LED CONVERSION ELECTRICAL PLANS
- REVISED GARAGE SERVICE DOOR PAD TO BE 3'-0"X3'-0"
- REVISED KITCHEN KNEE WALL AT ISLAND 2X6.

04-02-20 COMPLETED REVISION TO INCLUDE:

REVISED FOUNDATION AT OWNER'S SHOWER TO MATCH FLOOR PLAN.

04-08-20 COMPLETED REVISIONS TO INCLUDE:

REVISED SHAMPOO NICHES TO BE STANDARD FOR 9000 SERIES PLANS AND FOR NON 9000 SERIES PLANS TO BE OPTIONAL.

06-22-20 COMPLETED REVISION TO INCLUDE:

REVISED LANAI LED ELECTRICAL LIGHTS, ADDED FAN AND SWITCHES.

10-31-20 COMPLETED 2020 BI-ANNUAL REVISIONS.

07-12-21 COMPLETED REVISION TO INCLUDE:

REVISED PLAN TO HAVE 150 AND 167 MPH STRUCTURAL NOTES

REVISED ELECTRICAL RISER TO 200 AMP

01-26-22 COMPLETED REVISIONS TO INCLUDE:

UPDATED PLANS PER SKU RATIONALIZATION

07-01-22 COMPLETED REVISIONS TO INCLUDE:

REMOVED SHOWER NICHES COMPLETELY FROM PLAN

01-10-23 COMPLETED REVISIONS TO INCLUDE:

ADDED THE ADDITIONAL 12" CABINET OPTION TO THE GOURMET KITCHEN OPTION

GENERAL ELECTRICAL NOTES:

NOTES: UNLESS OTHERWISE NOTED,

1. Electrical outlet heights as measured from finished floor to center line of the box to be: 16" AFF (general). In a Flood Zone, all electrical equipment to be at or above DFE.
   - Kitchen 44" AFF
   - Bathroom 39" AFF
   - Laundry Room 36" AFF
   - Exterior Waterproof 12" AFF
   - Garage - general purpose 48" AFF
   - Range 2" AFF
2. All trim plates and devices to be ganged, where possible.
3. Electrical switches to be at 42" centerline above finished floor.
4. Electrical plan is intended for bid purposes only. All work shall be done in strict accordance with the National Electric Code (NEC), latest edition, by a licensed electrical contractor who shall be responsible for the installation & sizing of all electrical, wiring & accessories.
5. Smoke detectors shall be in accordance with R314.1 and listed in accordance with UL 217.
6. Provide AFCI's (Arc-Fault Circuit Interrupters) combination type installed to provide protection of the branch circuits in all dwelling units per NFPA 70 (Current Edition) and the NEC and as defined in UL 1699.
7. Provide Tamper Resistant Receptacles as required by the NFPA 70 (Current Edition).
8. Carbon Monoxide Protection: carbon monoxide alarms or detectors shall be installed in all dwelling units in accordance with FBC R315 and NFPA 70. Such devices shall be listed by the appropriate standard, either ANSI/UL 2034, standard for single and multiple station CO alarms or UL 2075, gas and vapor detector sensor, according to the installation.
9. R315.1.2 Combination Alarms: combination smoke/carbon monoxide alarms shall be listed and labeled by a Nationally Recognized Testing Laboratory.
10. Keep all smoke detectors minimum of 36" from bathroom doors.
11. In new construction, smoke detectors shall be hardwired into an A/C electrical power source and shall be equipped with a monitored battery backup.
12. Bathroom exhaust fans must vent to the exterior of the building, ventilation to attic space and soffits is not acceptable.
13. Chapter 45 Private Swimming Pools - Outdoor swimming pools shall be provided with a barrier complying with R4501.17.1.1 through R4501.17.1.14.
14. Add GFCI protection to receptacles in laundry rooms and utility rooms of dwellings where installed within 6' of the outside edge of a sink. This would include the receptacle installed for a washing machine. Receptacle outlets shall not be required on a wall directly behind a range or sink to fulfill the requirement of an outlet every 24". The width of the sink or range is not to be included in the spacing of the outlets unless the distance from the sink or range is greater than 12" for straight counter tops and 18" for sinks and ranges installed in corner counters.

GENERAL ELECTRICAL NOTES:

NOTES: UNLESS OTHERWISE NOTED,

1. Electrical outlet heights as measured from finished floor to center line of the box to be: 16" AFF (general). In a Flood Zone, all electrical equipment to be at or above DFE.
   - Kitchen 44" AFF
   - Bathroom 39" AFF
   - Laundry Room 36" AFF
   - Exterior Waterproof 12" AFF
   - Garage - general purpose 48" AFF
   - Range 2" AFF
2. All trim plates and devices to be ganged, where possible.
3. Electrical switches to be at 42" centerline above finished floor.
4. Electrical plan is intended for bid purposes only. All work shall be done in strict accordance with the National Electric Code (NEC), latest edition, by a licensed electrical contractor who shall be responsible for the installation & sizing of all electrical, wiring & accessories.
5. Smoke detectors shall be in accordance with R314.1 and listed in accordance with UL 217.
6. Provide AFCI's (Arc-Fault Circuit Interrupters) combination type installed to provide protection of the branch circuits in all dwelling units per NFPA 70 (Current Edition) and the NEC and as defined in UL 1699.
7. Provide Tamper Resistant Receptacles as required by the NFPA 70 (Current Edition).
8. Carbon Monoxide Protection: carbon monoxide alarms or detectors shall be installed in all dwelling units in accordance with FBC R315 and NFPA 70. Such devices shall be listed by the appropriate standard, either ANSI/UL 2034, standard for single and multiple station CO alarms or UL 2075, gas and vapor detector sensor, according to the installation.
9. R315.1.2 Combination Alarms: combination smoke/carbon monoxide alarms shall be listed and labeled by a Nationally Recognized Testing Laboratory.
10. Keep all smoke detectors minimum of 36" from bathroom doors.
11. In new construction, smoke detectors shall be hardwired into an A/C electrical power source and shall be equipped with a monitored battery backup.
12. Bathroom exhaust fans must vent to the exterior of the building, ventilation to attic space and soffits is not acceptable.
13. Chapter 45 Private Swimming Pools - Outdoor swimming pools shall be provided with a barrier complying with R4501.17.1.1 through R4501.17.1.14.
14. Add GFCI protection to receptacles in laundry rooms and utility rooms of dwellings where installed within 6' of the outside edge of a sink. This would include the receptacle installed for a washing machine. Receptacle outlets shall not be required on a wall directly behind a range or sink to fulfill the requirement of an outlet every 24". The width of the sink or range is not to be included in the spacing of the outlets unless the distance from the sink or range is greater than 12" for straight counter tops and 18" for sinks and ranges installed in corner counters.

1. Electrical outlet heights as measured from finished floor to center line of the box to be: 16" AFF (general). In a Flood Zone, all electrical equipment to be at or above DFE.

Kitchen	44" AFF
Bathroom	39" AFF
Laundry Room	36" AFF
Exterior Waterproof	12" AFF
Garage - general purpose	48" AFF
Range	2" AFF

2. All trim plates and devices to be ganged, where possible.
3. Electrical switches to be at 42" centerline above finished floor.
4. Electrical plan is intended for bid purposes only. All work shall be done in strict accordance with the National Electric Code (NEC), latest edition, by a licensed electrical contractor who shall be responsible for the installation & sizing of all electrical, wiring & accessories.
5. Smoke detectors shall be in accordance with R314.1 and listed in accordance with UL 217.
6. Provide AFCI's (Arc-Fault Circuit Interrupters) combination type installed to provide protection of the branch circuits in all dwelling units per NFPA 70 (Current Edition) and the NEC and as defined in UL 1699.
7. Provide Tamper Resistant Receptacles as required by the NFPA 70 (Current Edition).
8. Carbon Monoxide Protection: carbon monoxide alarms or detectors shall be installed in all dwelling units in accordance with FBC R315 and NFPA 70. Such devices shall be listed by the appropriate standard, either ANSI/UL 2034, standard for single and multiple station CO alarms or UL 2075, gas and vapor detector sensor, according to the installation.
9. R315.1.2 Combination Alarms: combination smoke/carbon monoxide alarms shall be listed and labeled by a Nationally Recognized Testing Laboratory.
10. Keep all smoke detectors minimum of 36" from bathroom doors.
11. In new construction, smoke detectors shall be hardwired into an A/C electrical power source and shall be equipped with a monitored battery backup.
12. Bathroom exhaust fans must vent to the exterior of the building, ventilation to attic space and soffits is not acceptable.
13. Chapter 45 Private Swimming Pools - Outdoor swimming pools shall be provided with a barrier complying with R4501.17.1.1 through R4501.17.1.14.
14. Add GFCI protection to receptacles in laundry rooms and utility rooms of dwellings where installed within 6' of the outside edge of a sink. This would include the receptacle installed for a washing machine. Receptacle outlets shall not be required on a wall directly behind a range or sink to fulfill the requirement of an outlet every 24". The width of the sink or range is not to be included in the spacing of the outlets unless the distance from the sink or range is greater than 12" for straight counter tops and 18" for sinks and ranges installed in corner counters.

1. Roofing
   - A. See elevation or roof plan for roof overhangs.
   - B. Shingle, Tile, or Metal Roofing. installed over approved underlayment OR Single/Multi-ply roofing over approved substrate.
   - C. Indicates Aluminum, Vinyl, Hardi Soffit (Vented per attic venting calculations).
   - D. Indicates off-ridge roof vent. Refer to Roof Plan for calculation.
   - E. Indicates Flashing where roof planes intersect with wall planes.
   - F. Indicates the location of Aluminum, Vinyl, Hardi Fascia board.
   - G. Pre-fabricated aluminum awning/canopy
   - H. Single-Ply TPO.
2. Walls
   - A. Indicates decorative cementitious finish as per ASTM C-926. All textures are determined by the builder specifications.
   - B. Indicates Exterior Plaster finish on wire lath, over water resistive barriers, over wood sheathing on framed exterior wall.
   - C. Indicates fiber cement board or similar siding. (size per note)
   - D. Indicates Decorative Stucco Finish over rigid foam core.
   - E. Indicates Decorative Stucco banding/coating with a smooth finish.
   - F. Indicates simulated stone header (will need to show as staggered).
   - G. Indicates simulated stone veneer.
   - H. Indicates simulated brick veneer header.
   - I. Indicates simulated brick veneer.
   - J. Indicates deco foam with simulated wood finish applied to stucco.
   - K. Hardie Board and Batten.
   - L. Hardie Board Corner/Head/Sill Trim.
   - M. Exposed painted truss tails.
   - N. Applied Wall Tile.
   - O. Shake Siding
3. Indicates approved Overhead Garage Door.
4. Indicates P.T. wood post with approved wrap (PVC, Hardiboard, etc). Refer to structural plans for connections and post size.
5. Indicates Optional Exterior Wall Mounted Light Fixture. All fixtures are to be verified with elevation style. Center Line of light to be 6'-0" A.F.F. U.N.O.
6. Railing
   - A. Indicates Railing at 36" high. Railing is powder coated aluminum. (GC to coordinate color)
   - B. Indicates Railing at 36" high. Railing is stainless steel cable with powder coated aluminum post. Cable post are to be 2" away from adjacent wall or structure.

CITY COUNCIL AGENDA ITEM

Memo Date: December 13, 2023
Agenda Date: December 19, 2023
Prepared By: Eric Raasch, AICP – Inspire Placemaking Collective, Inc.; Contract Planner to the City of Cocoa
Through: Stockton Whitten – City Manager
Requested Action:

Pass on Second and Final Reading approval of a PUD / Rezoning (Ordinance 22-2023) for one (1) parcel from Brevard County General Use (GU) to City of Cocoa Planned Unit Development (PUD), a Large-Scale Site Plan, and a Preliminary Subdivision consistent with Chapter 18 Subdivisions and Appendix A Zoning of the City Code for Windward Preserve.

BACKGROUND:

Project Information:

The proposed Windward Preserve PUD is located south of State Road 528 (Beachline) and east of Interstate 95. Windward Preserve includes one parcel of land identified by the Brevard County Property Appraiser as parcel identification number 24-35-10-00-502. The proposed project will be accessed through two access points off of James Road.

History:

This project dates back to 2004, at which time the City approved Ordinance 31-2004 to annex the subject property into the City of Cocoa. Later in 2004, Brevard County filed a Petition for Writ of Certiorari to challenge the annexation. In 2005, the City entered into the City of Cocoa / Hagen-Nicolson Properties, LLC Preceding Development Agreement, which contemplated the exchange of development rights and City services in exchange for the annexation. This agreement was amended in 2006 to replace Hagen-Nicolson Properties, LLC with a new development entity, Barrera Shores, LLC. In 2008, Brevard County and City of Cocoa entered into a Stipulated Settlement Agreement to resolve the outstanding litigation associated with the annexation. This agreement included certain provisions related to density, buffering, access, and traffic calming for the project. In 2022, the City and Beachline Partners, LLC entered into a Settlement Implementation Agreement to further outline the responsibilities of the City and the developer as it relates to the development of the property.

Project Details:

The proposed Windward Preserve PUD contains 212.20 gross acres, of which 177.18 are proposed for development. The remaining 34.92 acres will be placed into a conservation easement as shown in the Preliminary Plat. This project is proposed to

include 385 detached single-family dwelling units, which will be completed in two phases. The first phase will consist of 185 detached single-family dwelling units, the primary amenity center, and both entrances off James Road. The second phase will include 200 detached single-family dwelling units and the park area. The project will include a multi-use trail throughout the community. The project is consistent with the prior agreements between the current and previous owners and the City.

Future Land Use Designation: Very Low Density Residential / Conservation

Zoning District: Brevard County General Use (GU)

Existing Land Use: Vacant Land

Council District: District 3 – Councilmember Matthew Barringer

Legal Ad Date: November 21, 2023

Overview of Surrounding Area:

	Future Land Use Designations	Zoning Districts	Land Uses
North	Very Low Density Residential / Conservation (City)	General Use (Brevard County)	Retention Ponds / Brightline Railroad Tracks
South	RES 1 (Brevard County)	RR-1 Rural Residential (Brevard County)	Single-Family Residential
East	RES 1 (Brevard County)	RR-1 Rural Residential (Brevard County)	Single-Family Residential / Vacant Land
West	RES 1:2.5 (Brevard County)	AU Agricultural Residential and GU General Use (Brevard County)	Interstate 95 / Vacant Land / Single-Family Residential (West of I-95)

Preliminary Subdivision / Large Scale Site Plan Analysis
Consistency with Code of the City of Cocoa

The submitted application and plans have been reviewed by City staff for consistency with Chapter 18 – Subdivisions and Appendix A - Zoning of the City of Cocoa Code, and the development agreements that were previously approved by the City of Cocoa. Staff has found the applications to be in substantial compliance, with the exception of the items found in Appendix A within this report.

PUD Analysis:

The decision of the Planning and Zoning Board of the City of Cocoa on the preliminary / final development plan application shall include the findings of fact that serve as a basis for its recommendation. In making its recommendation, the Planning and Zoning Board of the City of Cocoa shall consider the following facts:

1. Degree of departure of proposed planned unit development from surrounding areas in terms of character and density.

Staff Finding:
The proposed Windward Preserve PUD is bordered by I-95 to the west and stormwater ponds associated with the Brightline rail system to the north. The site is bordered to the south and the east by larger-lot single-family development and undeveloped land that that has a maximum density of one (1) dwelling unit per acre within unincorporated Brevard County. The subject property has a Future Land Use Map (FLUM) designation of Very Low Density Residential, which allows for consideration of densities of up to four (4) dwelling units per acre. The proposed gross density for the project is 1.82 dwelling units per acre and the proposed net density is 2.1 dwelling units per acre, consistent with the underlying FLUM designation. While the proposal is slightly more dense than the surrounding communities to the south and the east, the applicant is proposing compatibility measures to provide a transition from this project and the adjacent communities. First, wetlands have been preserved adjacent to the eastern property line and there is no proposed access from the east of the site on Friday Road. Second, the applicant has located stormwater ponds, open space tracts, and preserved wetlands adjacent to the southern property line as a transition to the community to the south. Additionally, the property is subject to the Stipulated Settlement Agreement between Brevard County and the City of Cocoa that was recorded in Brevard County Records on January 9, 2008. That agreement restricts the gross density of the property to 2.3 dwelling units per acre or a maximum of 600 total residential units. The Settlement Implementation Agreement, recorded in Brevard County Records on July 28, 2022, further restricts the density of the subject property down to 418 single-family residential units. The proposed PUD has a gross density of 1.82 dwelling units per acre and 385 dwelling units, well under the maximum allowable under the prior development agreements.

2. Compatibility within the planned unit development and relationship with surrounding neighborhoods.

Staff Finding:
Both the Stipulated Settlement Agreement and the Settlement Implementation Agreement include provisions for compatibility with the surrounding area, specifically the existing residential communities located to the south and east of the property. These provisions include a cap on the number of units, minimum home sizes, the location of open spaces and preservation on the eastern and southern borders of the property, prohibition of access from Friday Road, the installation of traffic calming devices along James Road, the provision of various recreational amenities, and enhanced

landscaping at the project's entrance. Additionally, the site is bordered by I-95 to the east and stormwater ponds associated with the Brightline system to the north. The applicant's proposal is in compliance with these compatibility measures, as previously approved by the City of Cocoa in the respective agreements.

3. Prevention of erosion and degrading of surrounding area.

Staff Finding:
The Final Development Plan has been subject to certified analysis from licensed professionals (to include engineered site drawings, as well as relevant environmental conditions, topographical data and development impacts) to ensure that all applicable local, regional, state, and federal laws, with regard to the prevention of land erosion and degradation, are met. Over half (28.4 out of 54.11 acres) of the on-site wetlands will be preserved, and these wetlands and their upland buffers will aid in controlling and minimizing potential environmental impacts to the surrounding areas. Moreover, the project will be required to accommodate stormwater runoff onsite, thereby reducing impacts to the surrounding area.

4. Provision for future public education and recreation facilities, transportation, water supply, sewage disposal, surface drainage, flood control and soil conservation as shown in the preliminary development plan.

Staff Finding:
A review of the level of service for public facilities is provided below under the Concurrency Management section heading.

5. The nature, intent and compatibility of common space, including the proposed method for the maintenance and conservation of said common space.

Staff Finding:

Windward Preserve will have an amenity center, a park, and a multi-use trail system throughout the entirety of the development. The amenity center area (Tract F) will include a clubhouse, multi-purpose field, pool, and dog park and be part of Phase 1 of the development, which also includes a portion of the multi-use trail. The neighborhood park (Tract G) includes playground equipment, a trail, and a grilling area. The rest of the multi-use pathway and park area will be included with Phase 2 of the project. The amenity center and park areas are both consistent with the Settlement Implementation Agreement, which detail the minimum requirements for those facilities. The homeowner's association or Community Development District, as applicable, will own and maintain the recreational amenities within the project.

6. The feasibility and compatibility of the specified stages contained in the preliminary development plan to exist as an independent development.

Staff Finding:
Windward Preserve is proposed to be constructed in two phases. The first phase will include both access points from James Road, necessary infrastructure improvements, the amenity center, and 185 single-family dwelling units primarily located along the south and western portion of the development. Phase 2 will include the remaining infrastructure, the neighborhood park, and the remaining 200 single-family dwelling units along the north and eastern portions of the property. Each phase will be able to stand alone, with the access being provided in Phase 1.

7. The availability and adequacy of primary streets and thoroughfares to support traffic to be generated within the proposed planned unit development.

Staff Finding:
Per the Traffic Impact Study conducted by LTG Engineering & Planning dated April 2023, the project will generate an average of 3,488 daily trips at project build out. As part of LTG's analysis, segments of SR 524, Friday Road, James Road, Cox Road, and Westminster Drive were evaluated for peak-hour, two-way level of service at projected buildout. The analysis found that the segment of SR 524 from Cox Road to Industry Road is expected to exceed the peak hour two-way capacity at build out. However, Ordinance 14-2023 removed concurrency requirements for SR 524, and staff notes that the engineering and design for the widening of SR 524 is programmed in the Florida Department of Transportation (FDOT) tentative work program for fiscal year 2024 / 2025.

As stated further below, James Road is a Brevard County owned and maintained roadway. The road will be improved at the applicant's expense, and the applicant has been coordinating with the County regarding the road design and associated traffic calming measures.

8. The availability and adequacy of water and sewer service to support the proposed planned unit development.

Staff Finding:
As detailed in the Concurrency Management / Adequate Public Facilities section of this report, water, sewer and reclaimed water for the project will be serviced by City of Cocoa. Capacity is currently available to serve this project.

9. The benefits within the proposed development and to the general public to justify the requested departure from standard land use requirements inherent to a Planned Unit Development classification.

Staff Finding:

The PUD zoning classification is a concept that encourages and permits variations in development standards by allowing for the deviation in lot size, bulk or type of dwellings, density, lot coverage, and open space from that typically required under zoning district regulations. The purpose of a PUD is to encourage the development of planned residential neighborhoods that provide a range of uses designed to serve the residents of the community.

The PUD designation provides flexibility from conventional zoning standards to allow for conservation, wetland preservation, and efficient land use management; thus, securing open space for parks and recreational uses. Windward Preserve is proposed to include the preservation of over 34 ± acres of on-site wetlands and wetland buffers, which will be placed into conservation easements.

Further, the proposed development will have a favorable effect on the City's budget, and thus, a favorable effect upon its residents. There is an expected increase in ad valorem tax revenue from the build-out of the PUD, an increase in state and federal intergovernmental transfers based on population (e.g. sales and fuel surcharge taxes), and an increase in water and sewer revenues.

10. The conformity and compatibility of the planned unit development with any adopted development plan of the City of Cocoa.

Staff Finding:

The proposed PUD is consistent and compatible with the goals, objectives, and policies of the City of Cocoa's Comprehensive Plan.
Additionally, the proposed PUD meets the requirements set forth in the Stipulated Settlement Agreement and the Settlement Implementation Agreement, both of which have been approved by the City of Cocoa. The Settlement Implementation Agreement includes an exhibit showing the proposed community layout and the maximum number of dwelling units. The proposed PUD is generally consistent with that layout and represents a reduction of 33 lots from Preliminary Site Plan that was included as Exhibit A of the Settlement Implementation Agreement.
Additionally, the PUD code provides additional requirements for building setbacks, landscape buffers, minimum floor area per dwelling unit, maximum length of structures, off-street parking, lighting, trash enclosures, and preservation of trees/landscape requirements. These have been reviewed and found to be in compliance.

11. The conformity and compatibility of the proposed common space, primary residential and nonresidential uses within the proposed planned unit development.

Staff Finding:

Section 17(F)(3) of Article XI, Appendix A, Zoning, Code of the City of Cocoa, establishes the minimum common recreation and open space regulations for residential PUDs. The code defines common recreation and open space, related to a residential

planned unit development, as improved usable area designed and intended for the use or enjoyment of residents of the PUD. Moreover, “such usable space may be in the form of active or passive recreational areas including but not limited to playgrounds…nature trails and lakes.” The proposed PUD provides a trail system throughout the development that connects to the amenity center and to the park/ tot lot. This trail system connects to sidewalks and open spaces throughout the community. The common space and residential use within the proposed PUD have been designed to provide contiguous areas of open space throughout the community with the goal of preserving large wetlands throughout the development. Per code, the community is required to include 35.44 acres of open space and the applicant is proposing 35.52 acres of open space in addition to the preserved wetlands.

Site Plan Analysis:

The submitted application and plans have been reviewed by City staff for consistency with Chapter 18 – Subdivisions and Appendix A - Zoning of the City of Cocoa Code, and the development agreements that were previously approved by the City of Cocoa. Staff has found the applications to be in substantial compliance, with the exception of the items found in Appendix B within this report.

Consistency with Comprehensive Plan Policies and Objectives

Future Land Use Element

Policy 1.1.2.2: Very Low Density Residential (VLDR). Very low density residential areas consist of neighborhoods of single family detached housing. The following criteria shall be used for determining appropriate locations for very low density residential areas.

a. Very low density residential areas shall be buffered from the nuisance effects of agricultural uses, higher intensity uses and major traffic corridors.
b. Very low density residential developments should be located in areas where more intensive development would be unwarranted due to environmental constraints.

Policy 1.1.10.3: Innovative land use development patterns, including PUDs and Cluster Zoning shall be permitted and encouraged in appropriate areas, as defined in the land development regulations.

Objective 1.2.1: Smart Growth Principles. New development in the City shall incorporate “Smart Growth” principles that will lead to compact development standards as opposed to conventional development standards that encourage urban sprawl.

Future Land Use Element

Policy 1.1.2.13: The Conservation Future Land Use Category is intended to protect environmentally sensitive natural resource systems as defined in Chapter 163 Part II F.S.

B. The boundaries of the Conservation Future Land Use category may be adjusted to be consistent with a wetland jurisdictional line determination by the SJRWMD without the need for a comprehensive plan amendment. In those areas initially presumed but later determined not to be classified as a wetland will take on the future land use category assigned to the upland portion of the development site.

Staff Response: A portion of the wetlands within the project area are being proposed to be impacted through this request. The applicant has submitted an Environmental Resource Permit (ERP) through the St. Johns Water Management District (SJRWMD) that states that the quality of the wetlands that are proposed to be impacted are either low or average quality, with no wetland being identified as having high ecological value. SJRWMD issued Uniform Mitigation Assessment Method (UMAM) scores for the impacted wetlands, which ranged from 0-6, on a scale of 0 to 10. Should these wetland impacts be approved by the SJRWMD, this request will be consistent with FLU Policy 1.1.2.13.

Recreation and Open Space Element

Policy 10.1.2.2: All new development of recreational facilities in the City shall be required to meet the Florida Accessibility Code.

Staff Response: The proposed trails will be constructed with ADA compliant materials and maintenance will fall under the CDD or HOA, as applicable. The appropriate entity will be required to maintain the trail in accordance with ADA standards.

Concurrency Management / Adequate Public Facilities

Wastewater

The Windward Preserve project is going to generate 115,500 gallons per day. The Sellers Plant is currently permitted to treat 3.5 mgd of wastewater. The maximum peak flow over the past three months was 3.83 mgd with typical daily average flows of 2.0 mgd. Thus, there is sufficient capacity for wastewater.

Stormwater Management

The Level of Service (LOS) for Stormwater Management is as follows:

Design Storm Event”	25-year frequency/24-hour duration event
On-site Stormwater Management:	Retention of the first one inch of rainfall for areas of more than one acre.
Stormwater Quantity:	Post development stormwater runoff flow rates, quantities, peaks, and velocities

	shall be equal to or less than levels that existed prior to development.
Stormwater Quality:	No significant degradation of water quality in receiving water bodies.

The applicant has submitted a permit to the St. Johns River Water Management District and is not proposing any deviations from the City of Cocoa's above requirements or Water Management District standards.

Potable Water

Per Comprehensive Plan Potable Water policy 7.1.1.1, the City's level of service (LOS) standard for potable water is 122 gallons per capita per day (gpcpd) per Equivalent Residential Connection (ERC), or 340 gallons per day per ERC. The applicant's potable water analysis is based on a rate of 350 gallons per day per ERC, which is estimated to generate 64,983 gallons per day on average, when including the recreational amenity. The Dyal Plant provides potable for the City of Cocoa service area and it is currently permitted to operate at 48 million gallons per day (mgd). The maximum provision over the past twelve months is 34 mgd. Thus, there is sufficient capacity for potable water available to serve the project.

Solid Waste

The LOS standard for solid waste capacity within the City of Cocoa is 1.2 tons of solid waste disposal per capita per year. The residential collection LOS shall be two times per week per household with green waste and recyclables once per week. The City contracts with Waste Management for the provision of solid waste, and the projected solid waste generated will be collected consistent with the adopted level of service standards.

Roadways (Transportation)

Access to the project will be provided through the extension of James Road. James Road is a Brevard County owned and maintained roadway. The road will be improved at the applicant's expense, and the applicant has been coordinating with the County regarding the road design and associated traffic calming measures.
Per the Traffic Impact Study conducted by LTG Engineering & Planning dated April 2023, the project will generate an average of 3,488 daily trips at project build out. As part of LTG's analysis, segments of SR 524, Friday Road, James Road, Cox Road, and Westminster Drive were evaluated for peak-hour, two-way level of service at projected buildout. The analysis found that the segment of SR 524 from Cox Road to Industry Road is expected to exceed the peak hour two-way capacity at build out. The design for the widening of SR 524 is programmed in the Florida Department of Transportation (FDOT) tentative work program for fiscal year 2024 / 2025.

Recreation

Per Comprehensive Plan Recreation Policy 10.1.1.3, the LOS standard for recreation facilities is 1.25 acres per 1,000 population.

Pursuant to the City of Cocoa Comprehensive Plan Evaluation and Appraisal Report (October 2010) Data and Analysis, Cocoa has a surplus of 118.34 acres of parks, which was determined to be more than sufficient to meet the needs of the citizens through 2020. Per the U.S. Census, the City's estimated 2022 population was 19,559, which requires 24.45 acres of park and recreation facilities within the City. The EAR identified the City as having 323.58 acres (including the 165.09 acres Cocoa Conservation Area) available for residents. Per the U.S. Census, the City has an average of 2.4 persons per household, which would yield a population of 925 people at buildout. Based on the City's LOS, the project will require 0.925 acres of recreation to accommodate the proposed population. The applicant is proposing 35.52 acres of open space and recreation within the project. Thus, the City has sufficient recreation and parks to support the project and maintain the adopted LOS.

Schools

A School Capacity Determination was filed with Brevard Public Schools for this project. The applicant will be required to comply with all applicable standards in terms of capacity and concurrency.

STRATEGIC PLAN CONNECTION:

N/A

BUDGETARY IMPACT:

Based on a 2.4 persons per dwelling unit multiplier, the project can be expected to add 925 persons to the City's population base. An increase in population will positively affect intergovernmental revenues received where the distribution formula is population based, such as gasoline and sales taxes.

In addition to the direct fiscal impact to the City's General Fund, the development project will increase the economic attractiveness of the City by increasing its market and trade area potential, an important factor to corporate site selectors as well as retail and dining establishments.

PREVIOUS ACTION:

The City of Cocoa has taken the following previous actions related to the subject property:

- **April 28, 2005**: City of Cocoa / Hagen – Nicholson Properties, LLC Preceding Development Agreement recorded in Brevard County Records
- **November 21, 2006**: City of Cocoa / Barrera Shores, LLC Preceding Development Agreement recorded in Brevard County Records
- **January 1, 2008:** Stipulated Settlement Agreement between Brevard County and the City of Cocoa recorded in Brevard County Records

- **July 28, 2022:** Settlement Implementation Agreement between City of Cocoa and Beachline Partners, LLC recorded in Brevard County Records
- **December 6, 2023** Planning and Zoning Board recommended approval to City Council.
- **December 12, 2023** City Council approval to Ordinance 22-2023 on the First Reading.

RECOMMENDED MOTION:

Pass on First Reading the Final PUD and Preliminary Subdivision and Large-Scale Site Plan for Windward Preserve with the conditions set forth below:

1. The project shall comply with the Planned Unit Development Plans for Windward Preserve.
2. The provided Development Schedule shall be binding upon the development of Windward Preserve. Amenities proposed for Phase One shall be completed prior to issuance of the 150th Certificate of Occupancy for Phase One. Amenities proposed for Phase Two shall be completed prior to the issuance of the 150th Certificate of Occupancy for Phase Two.
3. The Applicant shall satisfy all remaining review comments contained in Appendix A and B.
4. The clubhouse facility shall be an enclosed structure under heat and air.
5. Residential driveways shall be constructed of stone or brick pavers, or stamped and stained concrete.
6. All utilities constructed on the property including, but not limited to, electric, water, sewer, reclaimed water, cable, phone, fiber optics, natural gas, and other similar kinds of utilities to service the property constructed underground unless otherwise necessary to be above ground and approved by the City.
7. Each lot and all common landscaped areas shall be equipped with in-ground reclaimed water irrigation systems.
8. The project shall incorporate the use of energy efficient lighting systems, insulation, ENERGY STAR rated windows, low-flow water fixtures, modern heat pumps, energy efficient HVAC systems, and the ability for roof top solar panels.
9. The applicant shall coordinate with Brevard County and surrounding property owners to determine the applicable traffic calming devices for James Road and shall construct the traffic calming devices as approved by Brevard County. All traffic calming devices along James Road shall be constructed and completed following land clearing of the property but prior to any further construction or site work being completed.
10. Single-family living area shall be a minimum of 1,500 square feet, with an average of 1,800 square feet, and a minimum building footprint of 2,400 square feet.
11. The same architectural elevation shall not be built on a lot that is adjacent to or directly across the street from, or diagonal to the lot.
12. The developer shall comply with tree protection and preservation requirements found within Sec. 22 of the City of Cocoa Code, and shall be permitted to further supplement the Final Development Plan with revisions to the landscaping plans, a

tree preservation survey, and request for additional preservation or other credits in compliance with the Code prior to land clearing commencement.

13. The developer shall comply and address all comments by the City Surveyor prior to submittal of any application for final plat approval.
14. If a Community Development District is formed for this community, the applicant shall update and provide notice to the City regarding ownership and maintenance obligations for the common areas and infrastructure within the community.
15. The Applicant shall be required to produce approvals from St. John's River Water Management District permitting the proposed wetland mitigation plans such that the boundaries of the Conservation Area may be adjusted pursuant to Comprehensive Plan Policy 1.1.2.13.

CITY COUNCIL AGENDA ITEM

File ID:	2026-534
Prepared By:	Zoie Badalov, Senior Budget Analyst
Through:	Rebecca Bowman, Finance Director Stockton Whitten, City Manager
Requested Action:	Informational Item Only

BACKGROUND:

The attached spreadsheets reference construction projects with a previously authorized "contingency" as of May 31st, 2026. The report provides the project number, project description, construction contract cost of project, contingency amount authorized, date of City Council approval, resolution number for authorization of contingency, requisition numbers, and expenditure by fiscal year.

The second line of each project in the third column under "Construction contract not to exceed $" references the contingency amount that the City Council or City Manager, if within his purchasing authority, has approved. The last line of each project provides the remaining balance as of the report date.

BACKGROUND:

The following reports for the period ending May 31st, 2026 (FY26) provide information for the three major funds: General Fund, Water/Sewer Fund, and the Storm Water Fund. This May 2026 (FY26) report is unaudited and preliminary. Each of the major funds will have the following reports:

1. Budget by Account Classification Report

Summary of the annual budget, revenues collected and expenditures by fund. The detailed back-up documentation is found in the Revenue Report and the Detailed Budget Report Summary by Object.

2. Revenue Report

Detail by account number of the actual revenues collected vs. budget for the three major funds: General Fund, Water & Sewer, and Storm Water. This report shows the current period, the year-to-date totals, the annual budget and the unrealized balance.

· Estimated — represents either the current period or the year-to-date prorated budget
· Actual — represents actual revenue received either in the current period or year to date
· % Rev — the percentage of actual revenue received vs. budget
· Annual Estimate — annual budget
· Unrealized Balance — annual estimate (budget less actual year to date received)

3. Detail Budget Report Summary by Object

Summary of expenditures by account description vs. budget for the three major funds: General Fund, Water & Sewer, and Storm Water. This report shows the current period, the year to date totals, encumbrances, the annual budget and the unencumbered balance.

· Budget — represents either the current period or the year-to-date prorated budget
· Actual — represents actual cash expenditures either in the current period or year to date
· % Exp. — the percentage of actual expenditures vs. budget
· Encumbrance - encumbered amount
· Annual Budget - annual budget
· Unencumbered Balance — annual budget less actual year to date actual expenditures plus encumbrances
· % Budgeted — the percentage of year to date actual expenditures plus encumbrances

CITY COUNCIL AGENDA ITEM

Memo Date:	June 29, 2026
Agenda Date:	July 14, 2026
File ID:	2026-536
Prepared By:	Zoie Badalov, Senior Budget Analyst
Through:	Rebecca Bowman, Finance Director Stockton Whitten, City Manager
Requested Action:	Informational Item Only

BACKGROUND:

Pursuant to the Cocoa City Charter, Article XII, Section 5.b., the following report details the budget adjustments that were approved in Fiscal Year 2026 through May 31st, 2026.

Section 5. — Appropriations.

(a) Appropriations for expenditures shall be established by the budget, and from the effective date of the budget the various amounts stated therein as proposed expenditures shall be and become appropriated to the various objects and purposes set forth in the budget.

(b) At any time during the fiscal year, the city council may, by resolution, transfer part or all of the unencumbered appropriation balance from one department or major organizational unit to the appropriation for other departments or major organizational units. The city manager may transfer part or all of any unencumbered appropriation balances among programs within a department or organizational unit and shall report such transfers to the city council in writing in a timely manner. The monetary amount of the city manager's transfer authority shall be established by the city council by resolution.
